PORT CORPUS CHRISTI

Project No. 17-033B

September 13, 2017

TO ALL POTENTIAL BIDDERS

Subject: Addendum No. 3 for the Bulk Liquid Handling Facility at Bulk Dock 3

Ladies/Gentlemen:

This addendum is considered part of the Contract Documents and is issued to change, amplify, add to, delete from, or otherwise explain the Contract Documents. Where provisions of this addendum differ from those of the original Contract Documents, this addendum will take precedence and govern.

Bidders are hereby notified that they must incorporate this addendum into their bids, and it will be construed that the contractor's bid reflects with full knowledge all items, changes, and modifications to the Contract Documents herein specified. Bidders will acknowledge receipt of this addendum in the space provided on the Bid form.

BID BREAKDOWN SHEET

REMOVE Bid Breakdown Sheet in its entirety and **REPLACE** with *2nd Revision* Bid Breakdown Sheet

SPECIAL CONDITIONS

REMOVE Special Conditions in its entirety and **REPLACE** with *2nd Revision* Special Conditions

DRAWINGS ISSUED FOR BID

ADD notes to drawing number 17-033B-35 SHIP MOORING LAYOUT:
"2. This layout is for reference only."
"3. See drawing number 17-033B-47 for locations of new monopile mooring structures."

ADD drawing number 17-033B-47 MOORING STRUCTION LAYOUT

ADD drawing number 17-033B-48 MOORING MONOPILE NMS1 & NMS2 DETAILS

ADD drawing number 17-033B-49 EXISTING BREASTING STRUCTURE MODIFICATION DETAILS

ADD attached BILL OF MATERIALS table to drawing number 17-033B-134 BILL OF MATERIAL-2 for reference

REMOVE 50 KVA transformer reference on drawing number 17-033B-302, and **REPLACE** with 75KVA transformer Square-D manufacturer (EX75T3HCU) or equal

ADD note to drawing number 17-033B-302:
"Conduits 113 – 117 are shown incorrectly on drawing 17-033B-302. Refer to Conduit and Cable Schedule (drawing 17-033B-304) and Conduit Layout (drawing 17-033B-305) for conduit numbering."

ADD note to drawing number 17-033B-307:
"5. The Pull Boxes shall be manufactured by Old Castle or equal. Large Pull Box shall be Carson 2436 and 36" deep and E-PB-01 & 02 will be Carson 2424 and 24" deep."

ADD note to drawing number 17-033B-322:
"5. Static ground system shall be RETRACT-A-CLAMP-COILED MOD#RAC 20 or equal."

ADD drawing number 17-033B-356 DETAILS in reference to Cable Trays

ADD drawing number 17-033B-357 MISCELLANEOUS DETAILS & VCU #2 BUILDING LAYOUT

REFERENCE DRAWINGS

ADD the following drawings to Appendix A - Control Narrative and Reference Drawings:

2nd Revision BID BREAKDOWN SHEET
BULK LIQUID HANDLING FACILITY
AT BULK DOCK 3
PORT OF CORPUS CHRISTI AUTHORITY

BREAKDOWN OF BID PRICES

This breakdown is a part of the Contract Documents and is designed to help the PCCA evaluate the bids to detect possible errors or omissions and to establish values for the individual items of work so that modifications to the contract can be more easily resolved. Please fill out the items listed below so that the total matches the prices shown on the bid. The bidder is invited to include his own estimates if he so chooses.

ITEM	DESCRIPTION	UNIT	DESIGN QUANTITY	BIDDER'S QUANTITY	UNIT AMOUNT	TOTAL AMOUNT
BASE BID						
General						
1.01	Mobilization/Demobilization	LS	1		$	$
1.02	Bonds and Insurance	LS	1		$	$
General Civil & Site Improvements						
2.01	Best Management Practices/StormWater Pollution Prevention Plan implementation and monitoring	LS	1		$	$
2.02	Site Demolition and Clearing (including dock modification)	LS	1		$	$
2.03	Limestone Flexible Base (TxDOT Item 247, TY A GR 1)	CY	200		$	$
2.04	Security Personnel Gate	EA	1		$	$
Foundation and Structural Work						
3.01	30-inch diameter pile foundation system for Convey System (Dock to Road Crossing)	LF	300		$	$
3.02	Pipe bridge foundation for Convey System	CY	19		$	$
3.03	Structural Steel and modifications for Convey System	LB	10,500		$	$
3.04	Relocation, transport, un-assembly/reassembly and erection of existing steel bridge for Convey System	LS	1		$	$
3.05	18-inch diameter pile foundation system for miscellaneous pipe supports	LF	400		$	$

ITEM	DESCRIPTION	UNIT	DESIGN QUANTITY	BIDDER'S QUANTITY	UNIT AMOUNT	TOTAL AMOUNT
3.06	Concrete cap for miscellaneous pipe supports	CY	12		$	$
3.07	Insepct, receive, and take delivey of up to nine mettering skids	LS	1		$	$
3.08	Structural Steel for miscellaneous pipe supports	LB	21,650		$	$
3.09	Excavation work for VCU #1, Blower and Knockout Drum Foundations	CY	35		$	$
3.10	Concrete foundations for VCU #1 Blower and Knockout Drum Skid	CY	40		$	$
3.11	18-inch diameter pile foundation system for VCU #2, Blower & Knockout Drum	LF	1,185		$	$
3.12	Excavation work for VCU #2, Blower and Knockout Drum Foundations	CY	80		$	$
3.13	Concrete foundations for VCU #2 Blower and Knockout Drum Skid	CY	75		$	$
3.14	Excavation work for Misc. Pipe Support Sleepers	CY	85		$	$
3.15	Concrete foundation for Misc. Pipe Support Sleepers	CY	50		$	$
3.16	18-inch diameter pile foundation system for Slop Tank	LF	160		$	$
3.17	Concrete slab and containment walls for Slop Tank	CY	50		$	$
3.18	18-inch diameter pile foundation system for control room VCU#1 & control room VCU#2	LF	280		$	$
3.19	18-inch diameter pile foundation system for miscellaneous T supports	LF	170		$	$
3.20	Miscellaneous Structural Steel	LB	31,900		$	$
3.21	Concrete Pad for AEP Transformer	LS	1		$	$
3.22	Miscellaneous Concrete Slabs and Pads including compressor, Nitrogen Service, stairs, etc.	LS	1		$	$
3.23	Asphalt Parking Lot Repair (Full Depth)(existing cross section or better)	SY	40		$	$

ITEM	DESCRIPTION	UNIT	DESIGN QUANTITY	BIDDER'S QUANTITY	UNIT AMOUNT	TOTAL AMOUNT
3.24	Temporary VCU#1 (if requred as determined by the Contractor), including providing, installation Commissioning, Testing, Fuel, and all other requirements for a functioning system	LS	1		$	$
Prefabricated Buildings						
4.01	Furnish and Install climate controlled Prefab Building for Electrical Main Power Panel and Vapor Combustor Unit (VCU) #1 Programmable Logic Controller	LS	1		$	$
4.02	Relocate and reinstall existing climate controlled building from Oil Dock 1	LS	1		$	$
Piping & Mechanical						
5.01	Piping & Mechanical Demolition on Flaoting Barge to accommodate the installation of new piping	LS	1		$	$
5.02	Acquire and install rental VCU unit for seven months complete with rental propane gas tank, as per specifications of John Zink	LS	1		$	$
5.03	Purchase & install VCU #1 piping per specifications	LS	1		$	$
5.04	16-inch Dia Carbon Steel Pipe with Appurtenances	LF	880		$	$
5.05	12-inch Dia Carbon Steel Pipe with Appurtenances	LF	1,390		$	$
5.06	4-inch Dia Carbon Steel Pipe with Appurtenances	LF	920		$	$
5.07	2-inch Dia Carbon Steel Pipe with Appurtenances (A53)	LF	450		$	$
5.08	2-inch Dia Carbon Steel Pipe with Appurtenances (A106)	LF	340		$	$
5.09	15 HP Air Compressor	EA	2		$	$
5.10	6-inch Dia Carbon Steel Pipe with Appurtenances	LF	1,650		$	$
5.11	3-inch Dia Carbon Steel Pipe with Appurtenances	LF	330		$	$
5.12	1 1/2-inch Dia Carbon Steel Pipe with Appurtenances	LF	120		$	$
5.13	1-inch Dia Carbon Steel Pipe with Appurtenances	LF	250		$	$
5.14	4-inch Flex Hose Vapor Line with Fittings (9 Locations)	LF	405		$	$
5.15	2-inch Flex Hoses	LF	24		$	$
5.16	1 1/2-inch Flex Hoses	LF	350		$	$

ITEM	DESCRIPTION	UNIT	DESIGN QUANTITY	BIDDER'S QUANTITY	UNIT AMOUNT	TOTAL AMOUNT
5.17	1-inch Flex Hoses	LF	400		$	$
5.18	8-Foot Dia. Slop Tank	LS	1		$	$
5.19	Slop Tank Pump	LS	1		$	$
5.20	12-inch Flex Hoses	LF	90		$	$
5.21	3-inch Flex Hoses for conduit	LF	300		$	$
5.22	16-inch Flex Hoses	LF	225		$	$
5.23	Spill Pan at Rail Loading	EA	18		$	$
5.24	Relocation of VCU #2 from Oil Dock 1, including removal, transport and installation	LS	1		$	$
5.25	VCU # 2 Repair, Testing, Calibration & Start-up	LS	1		$	$
5.26	Reinstallation and modification of existing Dock Safety Unit on Barge, including inspection, calibration, testing and startup	LS	1		$	$
5.27	Hydraulic Crane	LS	1		$	$
5.28	Furnish and Install Misc Valves & Controls	LS	1		$	$
Electrical						
6.01	Electrical Demolition	LS	1		$	$
6.02	Site Power Distribution complete with conduits, wiring and accessories, and inspection and testing	LS	1		$	$
6.03	Area Lighting Fixtures and Poles	LS	1		$	$
Instrumentation						
7.01	Furnish and Install Instrumentation & Controls complete in place	LS	1		$	$
7.02	Furnish and Install Main Programmable Logic Controller (PLC), with Programming	LS	1		$	$
7.03	Install and program existing PLC cabinet for Floating Barge	LS	1		$	$
7.04	Commissioning and Testing	LS	1		$	$
Total Base Bid						**$**

The preceding design quantities are approximate and are not guaranteed. Bidders will prepare their own estimate of work and bid accordingly. Bidders will indicate their own estimate of work under the column labeled "Bidder's Quantity" and calculate the "Total Amount" based on same. If this column is left blank, the bidder will be deemed to be in agreement with the design quantities and no adjustment in contract price will be made for variance.

LIST OF SUBCONTRACTORS & SUPPLIERS

Please list all intended subcontractors and major suppliers below. The bidder awarded the contract will be

Material Item:	Name of Suppler:
Concrete	
Reinforcing Steel	
Steel Piling	
Structural Steel	
Electrical System	
Piping/Mechanical	
Instrumentation System	
Vapor Combustion Unit	
Programmable Logic Controllers	

Subcontractors: *(If Any)*

2nd Revision SPECIAL CONDITIONS

1.1 GENERAL. The provisions of this section of the Contract Documents will govern in the event of any conflict between the Special Conditions and the General Conditions.

1.2 PROJECT DESCRIPTION / SCOPE OF WORK. The Contract Documents intend to provide and secure **BULK LIQUID HANDLING FACILITY AT BULK DOCK 3.**

Scope of work generally includes the construction and commissioning of a bulk liquids handling facility transfer of petroleum products from vessels to railcars. Site work improvements include fabrication of piping, racks, pile foundations, cast in place concrete, electrical improvements, area lighting, and mooring bollards. Equipment installation includes mechanical systems, instrumentation, control building, and Vapor Combustion Unit (VCU). Work also includes the relocation of 105-foot long pipe bridge.

1.3 TIME OF COMPLETION. It is anticipated this contract will be awarded at the PCCA Commission Meeting of Tuesday, September 19, 2017. It is further anticipated that the Notice to Proceed will be issued upon execution of the Agreement by Monday, October 9, 2017. Contractor will achieve Substantial Completion by December 31, 2017, and Contractor will be required to reach Final Acceptance by March 1, 2018.

1.4 VAPOR COMBUSTION UNITS. Vapor Combustion Unit (VCU) #1 – If the fabrication, delivery and installation of the new VCU #1 extends beyond the required substantial completion time, Contractor shall provide a temporary VCU #1 until such new VCU #1 is furnished and installed. Contractor will be responsible for delivery, installation, commissioning, and temporary fueling of temporary VCU #1 until the new (permanent) (VCU #1 is delivered for installation by the Contractor. If a temporary VCU #1 is required, completion of temporary VCU #1 shall be provided prior to achieving Substantial Completion. A Notice of Substantial Completion and Final Acceptance will be issued for the Work to exclude the VCU #1. A separate Notice of Substantial Completion and Final Acceptance will be issued for the Work related to the new (permanent) VCU #1.

Owner Supplied Vapor Combustion Unit (VCU) #2 – Repairs to the Owner supplied VCU #2 are detailed in the construction drawings. Completion of VCU #2 repairs and installation are required prior to Substantial Completion.

1.5 LIQUIDATED DAMAGES. Liquidated damages in the amount of $2,000 per day will be assessed against the Contractor for each day beyond the required Substantial Completion time that the project remains substantially incomplete. Liquidated damages in the amount of $300 per day will be assessed against the Contractor for each day beyond the required Final Acceptance time that the project remains incomplete.

1.6 SCHEDULING CONSTRAINTS. The Contractor shall not interrupt operations of the PCCA, its Users, or service providers for the Users or the vessels moored at the Bulk Terminal Docks 1 and 2. Access to all the areas of the Bulk Terminal has priority over construction activities and the Contractor will coordinate construction work with the surrounding bulk material handling activities. The Contractor will stage material and equipment to not conflict with ship and barge traffic, adjacent rail facilities and/or gantry crane operations. Contractor may be required to move materials and equipment as directed or as necessary during construction.

Furthermore, the Contractor is required to protect any work-in-progress from dock activity. The Contractor shall work during daylight hours and around the vessel loading schedule. Work that can be accomplished without disruption to cargo transfer activities may be allowed during loading activities. The Contractor shall coordinate the work schedule with the vessel loading schedule weekly at progress meetings with PCCA. Details and procedures for communicating this information will be established at the Pre-Construction conference.

See Special Conditions, 1.12 MATERIALS TO BE FURNISHED BY OWNER.

1.7 ACCESS. To access Bulk Dock 3 from the Joe Fulton Corridor, Contractor must use the PCCA Bulk Terminal Gate. For accessing Oil Dock 1 and adjacent areas from the Joe Fulton Corridor, Contractor must use the PCCA Avenue F Gate. Contractor is advised that there are active railroad tracks that traverses the entrance/access roads and that train delays are possible. These areas are "Restricted" or "TWIC Secure" areas as defined by Technical Section 01 14 13, and provisions of this specification apply. Contractor employees are also required to have Contractor Safety Council of the Coastal Bend for Basic Plus of Marsec Security training at this project site.

1.8 PERMITS. Contractor shall comply with applicable terms and conditions mandated in the permits/licenses and the permits/licenses are part of the contract. A City of Corpus Christi building permit is not required for this Project, however, applicable codes and regulations do apply.

Changes in applicable laws and regulations or modification to permits and licenses that occur after Contract Award will be incorporated into the Contract by a written change order that will address any applicable cost or schedule impacts.

1.9 GEOTECHNICAL ENGINEERING STUDY. A geotechnical report prepared by Professional Service Industries, Inc. (PSI) titled "Subsurface Exploration and Foundation Evaluation for Proposed PCCA Bulk Dock 3," dated July 9, 1996 is available on request.

1.10 ENVIRONMENTAL POLICY. The following Environmental Policy supersedes the policy listed in the General Conditions. The new Environmental Policy states:

The Port of Corpus Christi Authority ("***Port***") Commission formally adopts a set of guidelines designed to further demonstrate Environmental Leadership in the South Texas Coastal Bend region.

In its commitment to be "***An Environmental Leader,"*** the Port of Corpus Christi Authority in collaboration with stakeholders will strive to exceed what is required as a minimum by applicable rules and regulations to mitigate environmental impacts, prevent pollution, and employ continuous improvement policies and environmental stewardship initiatives that promote the following five (5) key precepts:

- **Air Quality** in attainment of national air quality standards and in support of the Corpus Christi region's efforts to stay in attainment through voluntary actions;
- **Water Quality** that maintains or improves the health of the coastal bend ecosystems;
- **Soils & Sediments** protective of human health and the environment;
- **Wildlife Habitat** development, improvements, and replacement when modification to existing habitat is necessary; and
- **Environmental Sustainability** in the development of port facilities and in ongoing port operations.

The Port's Environmental Policy is the formalization of many existing environmental programs that address soil, sediment, wildlife, air and water quality impacts. Together, these programs have already realized tremendous positive impacts in the surrounding communities and estuaries. The Port also intends to use legislative channels, where appropriate, to help meet its environmental agenda.

The Environmental Policy is one of the strategic imperatives that will be considered and integrated into decisions related to the development of infrastructure or the operations of Port facilities, supporting the Port of Corpus Christi's vision *To Be the Energy Port of the Americas* and its mission of *Leveraging Commerce to Drive Prosperity* for the Port, its stakeholders, and the Community, Region, State, and Nation.

1.11 MATERIALS TO BE FURNISHED AND INSTALLED BY CONTRACTOR. All equipment specified on the drawings and included as part of the bill of materials for valves, fittings, instrumentation, etc. shall be purchased and installed by the contractor unless otherwise specified on this Special Conditions, Engineer's Plans and Specifications and bid documents.

1.12 MATERIALS TO BE FURNISHED BY OWNER. The following items are furnished by the Owner for use on this project. Bidders shall contact Mr. Carlos Martinez at 361.885.6692 or via email at carlos@pocca.com to arrange to inspect these systems during bidding. Bidders shall provide a minimum of 48 hours' notice for inspection requests.

a. Vapor Combustion Unit #2 – Vapor Combustion Unit (VCU) #2 is available for inspection at Oil Dock 1 during project bidding. Oil Dock 1 is an active terminal and inspections shall be coordinated to not interfere with ongoing dock operations.

Contractor shall inspect VCU #2 to determine repairs required to provide for a fully functioning VCU #2 system. By submitting a bid, Contractor acknowledges that the Owner furnished VCU #2 is suitable for repair, installation and use with the Project.

b. Steel Bridge for Convey System – The steel bridge system is currently erected and located to the west of Oil Dock 1 and south of the PCCA Maintenance facility and is available for inspection during project bidding. Contractor shall take ownership of the bridge system upon Award of Contract. Steel bridge superstructure shall be unassembled as required, transported to, and re-assembled/erected at the project site in accordance with the Construction Documents. The PCCA shall retain ownership of the existing capped/flanged steel pipe segments located in the top section of the bridge and the Contractor shall deliver these pipe segments to a PCCA identified area within the PCCA Inner Harbor.

c. Floating Barge System with Hose Tower, Hydraulic Crane and Dock Safety Unit Skid - The floating barge system is located at Bulk Dock 3 and is available for inspection during project bidding. Bidders shall contact Mr. Carlos Martinez (see paragraph above). Providing for safe and effective barge mooring during construction shall be the Contractor's responsibility. Contractor to inspect current barge mooring system and make adjustments as necessary to provide for safe and effective mooring during construction activities. By submitting a bid, Contractor acknowledges that the floating barge system can be moored safely during Contractor's activities.

d. Climate Controlled Building – The Climate Controlled Building is currently located at Oil Dock 1. The building is available for inspection during project bidding. By submitting a bid, Contractor acknowledges that the Owner furnished building is suitable for transport and installation for this Project.

e. Metering Skids – Metering skids are not currently located onsite and are scheduled to arrive on or before December 1, 2017. Contractor shall inspect, receive, and take ownership of up to nine metering skids upon arrival of equipment on site. Contractor shall coordinate with the third party metering skid provider (contact information for third party provider to be provided after Award of Contract). Metering skids are wheel mounted units that can be transported/maneuvered upon delivery with a light pickup truck (approximately 20,000 pound towing capacity). It will be contractor's responsibilities to modify the metering skid's control circuit to interphase its operation in conjunction with the overall system.

f. As soon as the PCCA has determined the project is Substantially Complete, Contractor will provide, at a minimum, 14 day notice to PCCA for coordination of a vessel loaded with crude oil or petroleum products ready to be discharged at Bulk Dock 3 for systems acceptance testing, provided that such vessel will not be required to remain at Bulk Dock 3 for such purposes for more than 72 hours.

1.13 INSURANCE. USL&H, Maritime, Builder's Risk, Contractor's Pollution Liability, Railroad Protection and Umbrella Liability Coverage is required for this project.

In addition to the required insurance coverage's pursuant to the GENERAL CONDITIONS, Contractor shall provide and maintain the following insurance coverages (the "Policies") as follows:

a. To the extent that Contractor owns and/or will operate vessels in order to perform the work within the specifications for this Project, a Protection and Indemnity insurance policy is required, with a minimum limit of $10,000,000 any one accident or occurrence, naming the Port of Corpus Christi Authority, its PCCA Commissioners, officers, officials employees and agents as additional insured's.

b. See Section 3.36 of the General Conditions for all other requirements.

1.14 BONDS. Performance and Payment Bonds are required when the successful bidder executes the contract, each for 100% of the total contract price.

1.15 QUALIFICATION OF CONTRACTORS. Contractor, subcontractors, vendors and material suppliers must be able to demonstrate a level of experience satisfactory to the PCCA in performing work similar to this project.

a. The Contractor shall employ for this Project, as its field administration staff, superintendents, and foremen who are careful and competent and acceptable to the PCCA. The Project Superintendent must have at least five years of recent experience in the oversight of projects that include similar work and are equal to or greater in size and complexity to this Project. This experience must include scheduling of manpower and materials, safety, coordination of Subcontractors, experience with the submittal process and contract closeout procedures. The Project Superintendent is to be present at the Site at all times that Work is being performed, Foremen must have at least five years of recent experience in similar work and be subordinate to the Project Superintendent. Foremen cannot act as a superintendent without prior written approval from the PCCA.

b. Contractors shall submit documentation concerning these requirements for PCCA review within 14 calendar days of Notice of Award of Contract is issued. Written approval is also necessary prior to a change in field administration staff during the term of this Contract. The Contractor's field administration staff, and any subsequent substitutions or replacement thereto, much be approved by the PCCA in writing prior to such Project Superintendent of Foreman assuming responsibilities on the Project.

c. Contractors and Subcontractors shall have a documented safety record that meets industry standards as applicable for their respective work categories.

1.16 PRE-CONSTRUCTION CONFERENCE. A pre-construction conference will be scheduled prior to commencement of construction.

1.17 RAILROAD WORKPLACE SAFETY. Attached for reference is Exhibit A - the Roadway Worker Protection (RWP), Roadway Maintenance Machines (RMM) and On-Track Safety Rules for the GWRR – Rail Link Region effective Monday, May 2, 2016. The Rail Link is the Corpus Christi Terminal Railroad (CCTR). The Port's Manager of Rail Operations is John Slubar and he will be the point of contact for setting up communications with the CCTR. Mr. Slubar can be reached at 361-885-6185.

1.18 USE OF PCCA FACILITIES AND UTILITIES. During execution of the Project, the Contractor will be allowed to use PCCA facilities and utilities as follows:

Facility/Utility	Allowed	Not Allowed
Restrooms / Lunchrooms		X
Offices		X
Telephones		X
Vending Machines		X
Water		X
Electricity		X
Sewage		X

Contractor is responsible for any required hookup or installation costs associated with use of the above. Contractor will not be allowed to overload any circuits with construction equipment or tool loads. PCCA needs and utilization of these facilities will have priority over those of Contractor. Contractor will be responsible for any damage to PCCA facilities or utilities caused by Contractor's use.

1.19 TESTING SCHEDULE. The following construction materials testing program will be performed in accordance with the Technical Specifications and General Conditions. Testing initially paid by PCCA that fails and requires follow-up testing will be paid by the Contractor:

(See Testing Chart on Page 7/13)

DESCRIPTION	RATE	EST QTY
SOIL:		
STANDARD PROCTOR - TRENCH BACKFILL	PER MATERIAL SOURCE	1
STANDARD PROCTOR - SUBGRADE	PER PROJECT SITE	1
DENSITIES - TRENCH BACKFILL	PER 200 LF TRENCH/LIFT	5
DENSITIES - SUBGRADE	PER 10000 SF/LIFT	5
FLEXIBLE BASE:		
SIEVE ANALYSIS	PER 3000 CY	1
ATTERBURG LIMITS	PER 3000 CY	1
DENSITIES OF COMPACTED BASE	PER 10000 SF/LIFT	3
CONCRETE:		
(UNCONFINED COMPRESSION, 7, 14, & 28 DAY)		
CONCRETE CAP	PER 50 CY OR PER DAY	3
CONCRETE FOUNDATION	PER 50 CY OR PER DAY	4
CONCRETE SLAB	PER 50 CY OR PER DAY	3
PIPING:		
STEEL PIPE WELDS	10% OF FIELD WELDS PER DAY (RADIOGRAPH)	30

Contractor shall coordinate and cooperate with PCCA's construction material testing contractor to schedule and conduct construction material tests as appropriate. Contractor to provide at least 24 hours advance notice to schedule construction materials tests. The PCCA may conduct additional testing at the PCCA's discretion.

1.20 LIST OF DRAWINGS. Accompanying these specifications and included herein by reference are the drawings listed as follows:

1.21 CONTRACTOR'S DAILY REPORTS. Daily reports will be prepared by the Contractor and submitted to PCCA Project Engineer at the conclusion of each week.

1.22 EXPLORATORY EXCAVATION. Underground utilities and structures shown on the project plans are shown as accurately as possible; however PCCA does not guarantee that all utilities are shown, or shown in the exact location. It shall be the responsibility of the Contractor at its sole expense to determine the exact location of underground utilities and structures that may interfere with construction by exploratory excavation prior to

commencing work. The Contractor shall proceed with caution in the excavation so that the exact location of underground utilities and structures, both marked and unmarked, may be determined. In the event that an underground utility or structure is encountered, it shall be the Contractor's responsibility at its sole expense to determine the utility and its owner, and notify the Engineer for a determination of direction for continuing work. The Contractor will be held responsible for the repair of any utility or structure damaged by the Contractor's actions or inactions during excavation. Prior to the end of each work day, exploratory excavations made shall be backfilled with the native excavated material and compacted to prevent subsequent settlement. Excavations made within paved areas shall be permanently resorted to its original condition. Excavated materials shall not be placed in storm drainage conveyances, temporarily or permanently.

1.23 CONCRETE WASHING. Washing out of concrete trucks serving the construction project is only allowed in areas approved by PCCA Project Manager. The Contractor will ensure that the discharge of the washout water will not cause groundwater contamination. Discharges from the washout of form release oils, curing compounds, and other materials are not permitted. All wastes must be properly disposed of offsite by Contractor.

1.24 AIR MONITORING NETWORK. PCCA maintains a system to monitor dust originating from the Bulk Terminal site. Contractor shall ensure at all times that construction activities are conducted in such a way as to not produce dust. If dust becomes an issue, contractor must immediately remedy the situation by the use of water sprays or whatever means necessary to prevent causing dust.

1.25 PREVAILING WAGE RATE. The following pages are lists of wage rates that have been determined to be the prevailing minimum rates in this area. Contractor will not pay less than these rates.

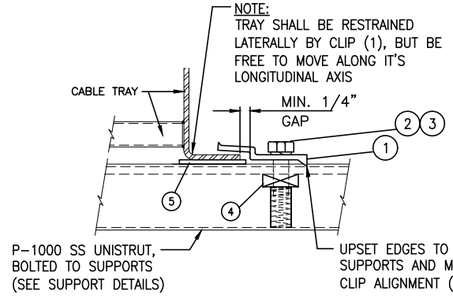
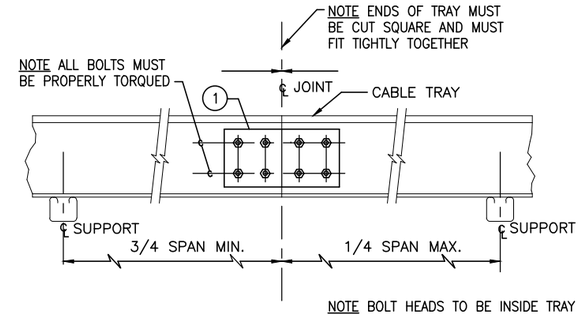
ITEM	QTY	MATERIAL DESCRIPTION
1	2	ANCHOR CLIP, FOR NEMA 20C TRAY, FIXED, S.S.
2	2	BOLT – 3/8–16 UNC x 1 1/4" HEX HEAD CAP SCREW S.S.
3	2	SPLIT LOCKWASHER 3/8" STAINLESS STEEL STD–DUTY
4	2	UNISTRUT NUT 3/8–16 THD'D W/SPRING, S.S.
5	1	1/4" NEOPRENE GASKET MATERIAL SPACER

1 CABLE TRAY RIGID HOLD DOWN
N.T.S.



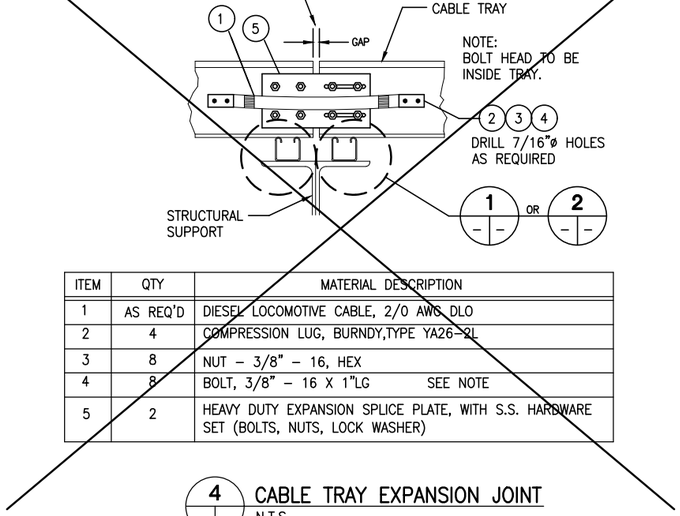
ITEM	QTY	MATERIAL DESCRIPTION
1	2	ANCHOR CLIP, FOR NEMA 20C TRAY, FIXED, S.S.
2	2	BOLT – 3/8–16 UNC x 1 1/4" HEX HEAD CAP SCREW S.S.
3	2	SPLIT LOCKWASHER 3/8" STAINLESS STEEL STD–DUTY
4	2	UNISTRUT NUT 3/8–16 THD'D W/SPRING, S.S.
5	1	1/4" NEOPRENE GASKET MATERIAL SPACER

2 CABLE TRAY EXPANSION GUIDE CLIP
N.T.S.



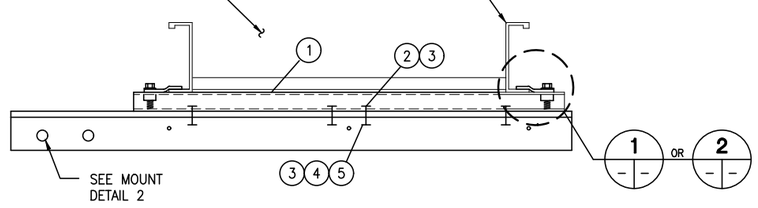
ITEM	QTY	MATERIAL DESCRIPTION
1	2	HEAVY–DUTY SPLICE PLATE WITH HARDWARE SET (BOLTS, NUTS & LOCKWASHERS – ALL S.S.)

3 CABLE TRAY SPLICE PLATE DETAIL
N.T.S.



ITEM	QTY	MATERIAL DESCRIPTION
1	AS REQ'D	DIESEL LOCOMOTIVE CABLE, 2/0 AWG, DLO
2	4	COMPRESSION LUG, BURNDY,TYPE YA26–2L
3	8	NUT – 3/8" – 16, HEX
4	8	BOLT, 3/8" – 16 X 1"LG SEE NOTE
5	2	HEAVY DUTY EXPANSION SPLICE PLATE, WITH S.S. HARDWARE SET (BOLTS, NUTS, LOCK WASHER)

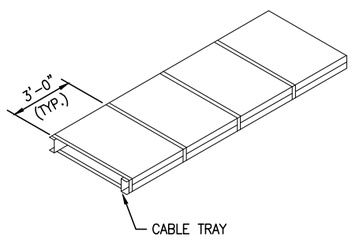
4 CABLE TRAY EXPANSION JOINT
N.T.S.



ALL HARDWARE SHALL BE 316 STAINLESS STEEL

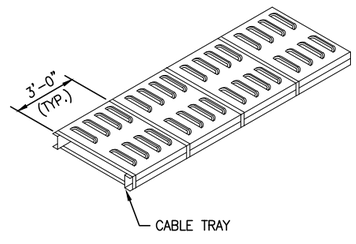
ITEM	QTY	MATERIAL DESCRIPTION
1	AS REQ'D.	STRUT, CHANNEL, P–1000 SS
2	5	BOLT BY REQUIRED LENGTH, 5/8" S.S.
3	10	FLAT WASHER, 5/8" S.S.
4	5	LOCK WASHER, 5/8" S.S.
5	5	NUT, 5/8" – 13 S.S.
6	5	RESILIENT SEAL WASHER, OUTSIDE

5 CABLE TRAY WALL SUPPORT
N.T.S.



POWER CABLE TRAY SHALL BE P&W ALUMINUM SOLID CABLE TRAY, SIZE 6" WITH CLAMPED COVER & STAINLESS STEEL HARDWARE.

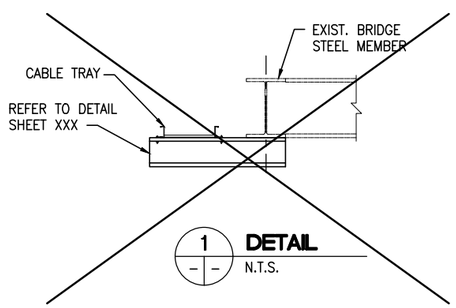
6 CABLE TRAY WITH SOLID COVER
N.T.S.



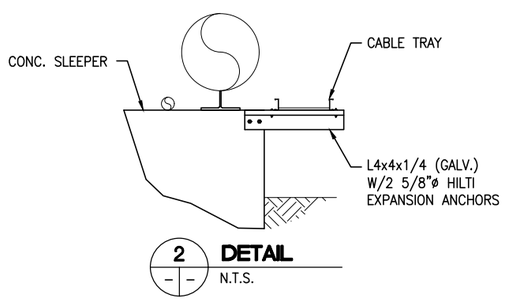
INSTRUMENT CABLE TRAY SHALL BE P&W ALUMINUM LOUVERED CABLE TRAY, SIZE 6" WITH CLAMPED COVER & STAINLESS STEEL HARDWARE.

6 CABLE TRAY WITH LOUVERED COVER
N.T.S.

CABLE TRAY AND ACCESSORIES MANUFACTURED BY LEGRAND OR EQUAL.



1 DETAIL
N.T.S.



2 DETAIL
N.T.S.

GENERAL NOTES:
1. ALL UNISTRUT CHANNEL SHALL BE 316 STAINLESS STEEL.
2. ALL HARDWARE SHALL BE 316 STAINLESS STEEL.

NOTES:
1. ALL PIPING TO CONFORM TO FLINT HILLS RESOURCES (FHR) PIPING SPECIFICATIONS 2.3 CAF - GENERAL PROCESS, CLASS 150 RF
2. SEAL WELD THREADS AFTER HYDROTESTING EXCEPT WHERE CONNECTED TO EQUIPMENT & INSTRUMENTATION.
3. MATERIALS SHOWN ON SHEETS 3 & 4 ARE FOR (1) TRAILER ASSY ONLY.
4. SEE P&ID DRAWING # PR-PID-0002_06 FOR EQUIPMENT / INSTRUMENT TAGS.
5. CONTRACTOR TO PROVIDE NON-SKID, OIL RESISTANT MAT FOR SAFE ACCESS TO VALVES AND EQUIPMENT.
6. CONTRACTOR TO RAISE PUMP & BASE PLATE AS REQUIRED.

F-_01
BASKET STRAINER
TYPE: ISUP FLOW CONTROLS, INC.
MODEL: BI50FSBW
SIZE: 4"
DESIGN PRESSURE: 285 PSI
DESIGN TEMPERATURE: 100° F

CP-_01
PUMP, CENTRIFUGAL
TYPE: QUISHER
MODEL: PCI_3X4X13ZE-CG-4-A
FLOW: 480 GPM
DESIGN PRESSURE: 67.8 PSI
MAX PRESSURE: 195 PSI
DESIGN POWER REQ'D: 30.6 BHP
PUMP MOTOR: 40 HP
FLUID: CRUDE OIL

T-_01
TANK, OVERFLOW
TYPE: STROBEL STAROSTKA CONSTRUCTION
MODEL: OVERFLOW TANK
MATERIAL: CARBON STEEL, A36
DESIGN PRESSURE: ATMOSPHERIC
DESIGN TEMPERATURE: 100
SIZE: 12'x12'x18.5"
TOTAL CAPACITY: 10.85 GAL
USABLE CAPACITY:

C-_01
COMPRESSOR
TYPE: SANBORN
MODEL: SP1682065
FLOW: 6.3 CFM @ 40 PSI, 5.5 CFM @ 90 PSI
DESIGN PRESSURE:
MAX PRESSURE: 135 PSI
COMPRESSOR MOTOR: 1.6 HP, 120V 15AMP
FLUID: AIR SUPPLY
TANK CAPACITY: 20 GAL

XS-_03
AUTOMATIC SAMPLER
TYPE: LINCO-CAMERON
MODEL: 3/4-1/2" x1/4"x3"
FLOW: 0-10 CC
DESIGN PRESSURE:
MAX PRESSURE: 100 PSI
SAMPLE CONTAINER: 5-GAL

AE-_01
BS&W MONITOR
TYPE: FMC INVALCO
MODEL: 4276-SVP MONITOR
CK-645-3-00 PROBE
F/452B DETECTOR
FLOW: 85 & W

FE-_01
CORIOLIS FLOW METER
TYPE: FMC/E+H
MODEL: 83F80-AAASASP1BBAW
FLOW: 480 GPM
SIZE: 3"

MS-_02
EXHAUST FAN
TYPE: GRAINGER
MODEL: 1XD93
DESIGN PRESSURE: 1/8" SP
DESIGN TEMPERATURE: 80° F
TOTAL CAPACITY: 1262 CFM
BLOWER MOTOR: 1/4 HP, 115V, 60Hz
STARTER TYPE: ACROSS THE LINE
3

AE-_01
BS&W MONITOR
TYPE: FMC INVALCO
MODEL: 4276-SVP MONITOR
CK-645-3-00 PROBE
F/452B DETECTOR
FLOW: 0-5% BS&W

FE-_01
CORIOLIS FLOW METER
TYPE: FMC/E&H
MODEL: 83F80-AAASASP1BBAW
FLOW: 480 GPM
SIZE: 3"
DESIGN PRESSURE: 285 PSI
DESIGN TEMP: -4°F TO 145°F

Project No. 17-033B

September 13, 2017

TO ALL POTENTIAL BIDDERS

Subject: Addendum No. 4 for the Bulk Liquid Handling Facility at Bulk Dock 3

Ladies/Gentlemen:

This addendum is considered part of the Contract Documents and is issued to change, amplify, add to, delete from, or otherwise explain the Contract Documents. Where provisions of this addendum differ from those of the original Contract Documents, this addendum will take precedence and govern.

Bidders are hereby notified that they must incorporate this addendum into their bids, and it will be construed that the contractor's bid reflects with full knowledge all items, changes, and modifications to the Contract Documents herein specified. Bidders will acknowledge receipt of this addendum in the space provided on the Bid form.

NOTICE TO BIDDERS

The time and date of the bid opening has been changed to **2:00 p.m., Monday, September 18, 2017.**

We anticipate providing additional clarifications Thursday, September 14, 2017.

Sincerely,

Carlos Martinez, P.E.

BID BREAKDOWN SHEET

REMOVE *2nd Revision* Bid Breakdown Sheet in its entirety and **REPLACE** with *3rd Revision* Bid Breakdown Sheet

SPECIAL CONDITIONS

2nd Revision SPECIAL CONDITIONS, Section 1.4 VAPOR COMBUSTION UNITS.

ADD the following sentence:
"The natural gas main line extension is being installed by others. Should this natural gas line not be available for a service connection, Contractor shall supply temporary fuel sources for testing and commissioning of all applicable dock equipment, systems, and VCUs. Contractor will then be responsible for connection of the VCUs to the utility supplied natural gas when the natural gas utility becomes available."

TECHNICAL SPECIFICATIONS

REMOVE technical specification Section 26 05 33 RACEWAYS in its entirety and **REPLACE** with attached technical specification *Revised* Section 26 05 33 RACEWAYS

APPENDIX A – CONTROL NARRATIVE AND REFERENCE DRAWINGS

ADD attached equipment data sheets at the end of appendix (6 sheets total)

DRAWINGS ISSUED FOR BID

REMOVE and **REPLACE** the following attached drawings:

3rd Revision BID BREAKDOWN SHEET
BULK LIQUID HANDLING FACILITY
AT BULK DOCK 3
PORT OF CORPUS CHRISTI AUTHORITY

BREAKDOWN OF BID PRICES

This breakdown is a part of the Contract Documents and is designed to help the PCCA evaluate the bids to detect possible errors or omissions and to establish values for the individual items of work so that modifications to the contract can be more easily resolved. Please fill out the items listed below so that the total matches the prices shown on the bid. The bidder is invited to include his own estimates if he so chooses.

ITEM	DESCRIPTION	UNIT	DESIGN QUANTITY	BIDDER'S QUANTITY	UNIT AMOUNT	TOTAL AMOUNT
BASE BID						
General						
1.01	Mobilization/Demobilization	LS	1		$	$
1.02	Bonds and Insurance	LS	1		$	$
General Civil & Site Improvements						
2.01	Best Management Practices/StormWater Pollution Prevention Plan implementation and monitoring	LS	1		$	$
2.02	Site Demolition and Clearing (including dock modification) and drainage improvements	LS	1		$	$
2.03	Limestone Flexible Base (TxDOT Item 247, TY A GR 1)	CY	200		$	$
2.04	Security Personnel Gate	EA	1		$	$
Foundation and Structural Work						
3.01	30-inch diameter pile foundation system for Convey System (Dock to Road Crossing)	LF	300		$	$
3.02	Pipe bridge foundation for Convey System	CY	25		$	$
3.03	Structural Steel and modifications for Convey System	LB	10,500		$	$
3.04	Relocation, transport, un-assembly/reassembly and erection of existing steel bridge for Convey System	LS	1		$	$
3.05	18-inch diameter pile foundation system for miscellaneous pipe supports	LF	400		$	$

ITEM	DESCRIPTION	UNIT	DESIGN QUANTITY	BIDDER'S QUANTITY	UNIT AMOUNT	TOTAL AMOUNT
3.06	Concrete cap for miscellaneous pipe supports	CY	126		$	$
3.07	Insepct, receive, and take delivey of up to nine mettering skids	LS	1		$	$
3.08	Structural Steel for miscellaneous pipe supports	LB	21,650		$	$
3.09	Excavation work for VCU #1, Blower and Knockout Drum Foundations	CY	35		$	$
3.10	Concrete foundations for VCU #1 Blower and Knockout Drum Skid	CY	40		$	$
3.11	18-inch diameter pile foundation system for VCU #2, Blower & Knockout Drum	LF	1,185		$	$
3.12	Excavation work for VCU #2, Blower and Knockout Drum Foundations	CY	80		$	$
3.13	Concrete foundations for VCU #2 Blower and Knockout Drum Skid	CY	75		$	$
3.14	Excavation work for Misc. Pipe Support Sleepers	CY	85		$	$
3.15	Concrete foundation for Misc. Pipe Support Sleepers	CY	50		$	$
3.16	18-inch diameter pile foundation system for Slop Tank	LF	160		$	$
3.17	Concrete slab and containment walls for Slop Tank	CY	50		$	$
3.18	18-inch diameter pile foundation system for control room VCU#1 & control room VCU#2	LF	280		$	$
3.19	18-inch diameter pile foundation system for miscellaneous T supports	LF	170		$	$
3.20	Miscellaneous Structural Steel	LB	31,900		$	$
3.21	Concrete Pad for AEP Transformer	LS	1		$	$
3.22	Miscellaneous Concrete Slabs and Pads including compressor, Nitrogen Service, stairs, etc.	LS	1		$	$
3.23	Asphalt Parking Lot Repair (Full Depth)(existing cross section or better)	SY	40		$	$
3.24	Mooring Structure	LS	2		$	$

ITEM	DESCRIPTION	UNIT	DESIGN QUANTITY	BIDDER'S QUANTITY	UNIT AMOUNT	TOTAL AMOUNT
3.24	Temporary VCU#1 (if requred as determined by the Contractor), including providing, installation Commissioning, Testing, Fuel, and all other requirements for a functioning system	LS	1		$	$
Prefabricated Buildings						
4.01	Furnish and Install climate controlled Prefab Building for Electrical Main Power Panel and Vapor Combustor Unit (VCU) #1 Programmable Logic Controller	LS	1		$	$
4.02	Relocate and reinstall existing climate controlled building from Oil Dock 1	LS	1		$	$
Piping & Mechanical						
5.01	Piping & Mechanical Demolition on Flaoting Barge to accommodate the installation of new piping	LS	1		$	$
5.02	Acquire and install rental VCU unit for seven months complete with rental propane gas tank, as per specifications of John Zink	LS	1		$	$
5.03	Purchase & install VCU #1 piping per specifications	LS	1		$	$
5.04	16-inch Dia Carbon Steel Pipe with Appurtenances	LF	880		$	$
5.05	12-inch Dia Carbon Steel Pipe with Appurtenances	LF	1,390		$	$
5.06	4-inch Dia Carbon Steel Pipe with Appurtenances	LF	920		$	$
5.07	2-inch Dia Carbon Steel Pipe with Appurtenances (A53)	LF	450		$	$
5.08	2-inch Dia Carbon Steel Pipe with Appurtenances (A106)	LF	340		$	$
5.09	15 HP Air Compressor	EA	2		$	$
5.10	6-inch Dia Carbon Steel Pipe with Appurtenances	LF	1,650		$	$
5.11	3-inch Dia Carbon Steel Pipe with Appurtenances	LF	330		$	$
5.12	1 1/2-inch Dia Carbon Steel Pipe with Appurtenances	LF	120		$	$
5.13	1-inch Dia Carbon Steel Pipe with Appurtenances	LF	250		$	$
5.14	4-inch Flex Hose Vapor Line with Fittings (9 Locations)	LF	405		$	$
5.15	2-inch Flex Hoses	LF	24		$	$
5.16	1 1/2-inch Flex Hoses	LF	350		$	$

ITEM	DESCRIPTION	UNIT	DESIGN QUANTITY	BIDDER'S QUANTITY	UNIT AMOUNT	TOTAL AMOUNT
5.17	1-inch Flex Hoses	LF	400		$	$
5.18	8-Foot Dia. Slop Tank	LS	1		$	$
5.19	Slop Tank Pump	LS	1		$	$
5.20	12-inch Flex Hoses	LF	90		$	$
5.21	3-inch Flex Hoses for conduit	LF	300		$	$
5.22	16-inch Flex Hoses	LF	225		$	$
5.23	Spill Pan at Rail Loading	EA	18		$	$
5.24	Relocation of VCU #2 from Oil Dock 1, including removal, transport and installation	LS	1		$	$
5.25	VCU # 2 Repair, Testing, Calibration & Start-up	LS	1		$	$
5.26	Reinstallation and modification of existing Dock Safety Unit on Barge, including inspection, calibration, testing and startup	LS	1		$	$
5.27	Hydraulic Crane	LS	1		$	$
5.28	Furnish and Install Misc Valves & Controls	LS	1		$	$
Electrical						
6.01	Electrical Demolition	LS	1		$	$
6.02	Site Power Distribution complete with conduits, wiring and accessories, and inspection and testing	LS	1		$	$
6.03	Area Lighting Fixtures and Poles	LS	1		$	$
Instrumentation						
7.01	Furnish and Install Instrumentation & Controls complete in place	LS	1		$	$
7.02	Furnish and Install Main Programmable Logic Controller (PLC), with Programming	LS	1		$	$
7.03	Install and program existing PLC cabinet for Floating Barge	LS	1		$	$
7.04	Commissioning and Testing	LS	1		$	$
Total Base Bid						**$**

The preceding design quantities are approximate and are not guaranteed. Bidders will prepare their own estimate of work and bid accordingly. Bidders will indicate their own estimate of work under the column labeled "Bidder's Quantity" and calculate the "Total Amount" based on same. If this column is left blank, the bidder will be deemed to be in agreement with the design quantities and no adjustment in contract price will be made for variance.

LIST OF SUBCONTRACTORS & SUPPLIERS

Please list all intended subcontractors and major suppliers below. The bidder awarded the contract will be

Material Item:	Name of Suppler:
Concrete	
Reinforcing Steel	
Steel Piling	
Structural Steel	
Electrical System	
Piping/Mechanical	
Instrumentation System	
Vapor Combustion Unit	
Programmable Logic Controllers	

Subcontractors: *(If Any)*

Revised

SECTION 26 05 33

RACEWAYS

PART 1 - GENERAL

1.01 SUMMARY:

A. Section includes requirements for conduits and conduit fittings. Conduit types shall be as shown on the Contract Drawings and as specified herein:

1. PVC-Coated Rigid Galvanized Steel (CRGS) – Aboveground Only

2. PVC Conduit (PVC) – Underground Only

3. Flexible Conduit - Connector to Motor

4. Associated Fittings

5. Pull and Junction Boxes

1.02 REFERENCES:

A. American National Standards Institute (ANSI):

1. C 80.1 Rigid Galvanized Steel Conduit
2. C80.5 Rigid Aluminum Conduit

B. National Electrical Manufacturers Association (NEMA):

1. TC 2 Electrical Plastic Tubing (EPT) and Conduit (EPC-4 and EPC-80)

2. TC 3 PVC Fitting for Use with Rigid PVC Conduit and Tubing

C. National Fire Protection Association (NFPA):

1. 70 National Electrical Code

D. Underwriters Laboratories Inc. (UL):

1. 1 Flexible Metal Conduit

2. 6 Rigid Metal Conduit

3. 360 Liquid-Tight Flexible Steel Conduit

4. 514B Fittings for Conduit and Outlet Boxes

5. 1660 Liquid-Tight Flexible Nonmetallic Conduit

1.03 SUBMITTALS – FOR APPROVAL:

A. Procedure:

1. Submit in accordance with Section 26 00 00, Electrical Provisions.

2. Provide one (1) complete submittal containing all items required herein.

3. Partial or incomplete submittals or submittals not complying with the requirements of Section 26 00 00 will be returned Disapproved without comment.

B. Product Data: Submit for each type of conduit, fitting, connector, pull and junction box, and wireway used on the project.

1.04 SUBMITTALS – RECORD DATA:

A. Procedure: Submit in accordance with Section 26 00 00, Electrical Provisions.

B. Product Data: Approved, as furnished data as listed above.

PART 2 - PRODUCTS

2.01 POLYVINYL CHLORIDE (PVC - SCHEDULE 40):

A. Conduit: Conduit, elbows and couplings shall be Schedule 40 rigid polyvinyl chloride (PVC) conduit per NEMA TC 2 with a 90^0 UL rating, and shall be the standard product of Krayloy or Carlon or approved equal.

B. Fittings: Fittings and accessories for use with Schedule 40 PVC conduit shall conform to NEMA TC 3 and shall be of the same material and manufacturer as the conduit.

2.02 PVC COATED RIGID GALVANIZED STEEL (CRGS):

A. Conduit: Prior to coating, all conduits, including elbows, couplings and nipples shall be standard weight, threaded, rigid galvanized steel.

B. Fittings: Prior to coating, fittings, accessories and device boxes for rigid galvanized steel conduit systems shall be the standard threaded type as manufactured by Crouse-

Hinds, or equal. Both fittings and covers shall be galvanized steel. All screws shall be stainless steel. Covers shall be gasketed.

D. PVC Coating: Conduit, fittings, boxes and accessories shall be Plasti-Bond 2 coated, as produced by Robroy Industries Inc. or an approved equal. Exterior surfaces shall have a 40 mil PVC coating applied by dip method. Interior surfaces of conduits, fittings, boxes, etc. shall have a fusion bonded phenolic coating with a thickness of 4-6 mils.

E. Fasteners and Supports: U-bolts, conduit clamps, straps, modular framing channels shall be 1-5/8" & 1-5/8" minimum section dimensions, Type 316 stainless steel, and shall be the product of Unistrut. Fasteners and attachment hardware shall be Type 316stainless steel.

2.03 RIGID ALUMINUM CONDUIT:

A. Conduit: Conduit, including elbows, couplings and nipples shall be standard weight, threaded, rigid aluminum 6063 alloy, with a copper content not to exceed 0.20%. The conduit shall have a silicon or lacquer coating inside.

B. Fittings: Fittings, accessories and device boxes for aluminum conduit systems shall be the standard threaded type as manufactured by Crouse-Hinds, or equal. Both fittings and covers shall be aluminum containing less than 0.4 of 1% copper. All screws shall be stainless steel. Covers shall be gasketed.

C. Fasteners: All straps and clamps used to support aluminum conduit shall be hot-dipped galvanized steel or malleable iron, with a 40 mil fused PVC coating, Plastibond, Ocal or equivalent. Strut type framing channels shall be either PVC coated galvanized steel or fiberglass.

D. Hardware: Nuts, bolts, screws, washers, etc. shall be stainless steel. Galvanized or cadmium-plated hardware will not be acceptable for use with aluminum conduit.

2.04 LIQUID-TIGHT FLEXIBLE METAL CONDUIT:

A. Flexible Conduit: Flexible conduit shall have a spiraled, flexible, galvanized steel inner core and an outer jacket of neoprene. Sizes 3/8" through 4" shall have a continuous, internal copper ground. Liquid-tight connectors shall be galvanized steel or malleable iron with neoprene sealing gaskets, external ground lugs and insulated throats. Connectors shall be Appleton type STB or Gedney or equal.

PART 3 - EXECUTION

3.01 APPLICATION:

A. General:

1. All field wiring shall be installed in conduit except as otherwise indicated.

2. Minimum conduit size shall be 1 inch nominal diameter.

3. Contractor to verify size requirements of all conduits in accordance with NEC fill requirements and with the actual conductors and cables furnished or required and furnish and install accordingly

B. Exposed:

1. Conduits installed exposed outdoors shall be plastic coated rigid galvanized steel.

2. Conduit installed exposed indoors shall be rigid galvanized steel.

C. Underground:

1. Conduit installed underground shall be Schedule 40 PVC with a reinforced steel concrete encasement.

2. Elbows used for underground conduit stub-ups from below grade shall be PVC coated rigid galvanized steel.

D. Conduit Risers to Cable Trays

1. Contractor to provide conduit take-offs from cable trays in sufficient quantities and sizes for the conductors and cables furnished or required for each installation.

E. Flexible Connections:

1. Indoor-dry areas: Liquid-tight, flexible metal conduit.

2. Indoor-wet, damp areas: Liquid-tight, flexible metal conduit.

3. Outdoors: Liquid-tight, flexible metal conduit.

3.02 INSTALLATION:

A. General:

1. Installation Methods: Conduit shall be installed exposed or underground as indicated on the drawings.

2. Cleaning: All conduit systems shall be completed and shall be swabbed clean before conductors are pulled in.

3. Field cuts: Do not cut conduit with pipe cutters.

4. Bends: Field made bends and offsets shall be made with a hickey or conduit bending machine. Crushed or deformed raceways shall not be installed. The maximum number of 90° bends, or equivalent between pulling points in any conduit run shall be three. Pull and junction fittings and/or boxes shall be provided as necessary to satisfy this requirement.

5. Protection: The ends of all conduit runs shall be closed immediately after installation to prevent the accumulation of water, dirt and other foreign material.

6. Locknuts: Conduits shall be fastened to all sheet metal boxes and cabinets with two locknuts. Locknuts shall have sharp edges for digging into the wall of metal enclosures. Bushings shall be installed on the ends of all conduits and shall be the insulating type.

7. Spare conduits: Spare conduits shall have a pull cord installed. The pull cord shall be plastic with a minimum tensile strength of 200 pounds. Not less that 12 inches of slack shall be left at each end of the pull cord.

8. Supports: Conduits shall be rigidly supported between couplings, on either side of bends and at terminations and fittings.

9. Boxes: Boxes shall be provided in the raceway system as indicated on the drawings and also wherever required for pulling of wires or making connections. Unless otherwise shown on the drawings, boxes installed in normally wet locations or on the outside of exterior surfaces shall be NEMA 4X, stainless steel sheet construction. Boxes shall be furnished with hinged and gasketed doors and stainless steel back panels. Each box shall have the volume required by the NEC for the number of conductors enclosed in the box. All boxes shall be securely anchored in place.

10. Flexible Connections: Flexible connections of short length shall be provided for equipment subject to vibration, noise transmission or movement. A separate ground conductor shall be provided across all flexible connections. Flexible conduit connections shall be rigidly and securely supported in an approved manner at intervals not exceeding 24 inches in length and within 12 inches of each conduit termination. Lengths of not more than 36 inches may be installed without such supports where flexibility is required.

11. Identification: Identify conduits in accordance with Industry Standards.

12. PVC: PVC conduit joints shall be solvent cement welded and shall be watertight. All PVC conduits shall have a separate grounding conductor installed. Where transition is made to the metallic conduit or enclosures, the grounding conductor shall be bonded to the metal conduit or enclosure.

B. Exposed Conduit:

1. Routing: Exposed conduit shall be run straight and true to structure lines. Changes in direction of runs shall be made with fittings or symmetrical bends. Conduit in damp locations or outdoors shall be exposed to the air on all sides and shall not be installed tight against walls, ceilings and structural members, etc. Clamp backs and/or offsets shall be used as necessary to maintain uniform clearances.

2. Supports: Acceptable supporting and clamping materials for exposed conduit include one-hole straps and clampback, "U" bolts, parallel or right angle conduit clamps, hot-dipped galvanized structural steel frames or modular stainless steel channel as manufactured by Unistrut or equal. Perforated steel tape, stamped steel one- and two-hole straps shall not be used. Conduits shall be supported in accordance with NEC 346-12.

3. Obstructions: Conduit shall be routed so as not to create any tripping or head banging hazard and so as not to create any obstruction to Owner's operation and maintenance activities.

4. Hubs: Watertight conduit hubs shall be installed where conduits enter the tops or sides of sheet metal or non-metallic enclosures.

5. Drains: Drain fittings shall be installed at low points throughout the conduit system where condensation is likely to occur.

C. PVC Coated Conduit:

1. PVC coated conduit requires special care to minimize damage to the PVC coating during cutting, threading, bending and installation. Contractor shall install conduit in accordance with manufacturer's recommended installation procedures.

2. Contractor shall be responsible for providing strap wrenches, cutting dies, vises, and other special tools required to install PVC coated conduit. Standard pipe wrenches, chain wrenches or channel locks shall not be used. Conduit bending equipment shall have the proper diameter shoes or dies to allow for the thickness of the PVC coating.

3. PVC coated conduit shall be supported with Type 304 stainless steel clamps, straps, hangers and supports. Attachment hardware shall be Type 316 stainless steel.

4. All PVC coated conduit and fittings that have teeth marks, cuts, nicks or are otherwise damaged shall be repaired by coating damaged area with a liquid PVC touch-up compound. Spray-type compound is not acceptable.

5. Unistrut channel supports and related accessories for use with PVC coated conduit shall be Type 304 stainless steel.

D. Rigid Galvanized Steel:

1. Rigid galvanized steel (RGS) conduit shall not be installed in direct contact with earth, concrete, steel, copper, brass or bronze. Where RGS conduit comes into contact with dissimilar metals or passes through concrete walls or floors, it shall be wrapped with 2 layers, half-lapped, of corrosion preventative pipe tape, Scotch 50 or equal.

2. RGS conduit threads shall have a coating of clear urethane and Penetrox, No-Ox-ld or equal, applied when installed.

E. Underground Conduit:

1. Concrete Encasement:
   a. Underground conduit runs shall be encased in or covered with red concrete as indicated on the drawings.

   b. Where conduits rise above grade, the concrete encasement shall extend to 6 inches above grade. Exposed concrete shall be natural color, not red. Where conduits run through equipment foundations or floor slabs, the concrete encasement shall butt the underside of the slab.

   c. The top of concrete encasement shall be a minimum of 36 inches below grade, unless otherwise indicated and must go below conflicts, such as yard piping, if the 36 inches minimum depth cannot be met. Compact trench backfill to original density.

   d. The concrete encasement shall be reinforced with a minimum of four (4) No. 4 steel reinforcing bars.

2. Separation: Minimum separation between the outside edges of adjacent conduits shall be 3 inches.

3. Elbows: All elbows shall be long radius type.

4. Spacers: Conduit spacers shall be installed at 5 feet on centers.

5. Expansion Fittings: Provide expansion fittings in above-ground, vertical portion of each underground conduit stub-up.

6. Bonding and Grounding: Metal conduits connected to underground PVC conduits shall be suitably bonded and grounded by connection to the equipment grounding conductor at the first above ground conduit termination or by an external grounding clamp and connection to a grounding electrode.

NOTES-

1. Vendor to supply nozzle total loads and moments and dynamic loads and moments for equipment.
2. Vortex breakers shall be provided for the Liquid Outlet Nozzle (Nozzle D)
3. Veseel MDMT shall be considered as minimum design temprature.
4. All Carbon / low alloy Steel Boltes / Studs / Nuts etc. shall be coated with flurocrbon polymer resin such as Omekote 4000 or Takecot 1000 with a thickness of 1000 microns
5. Spiral wound Gasket with Inconel 625 metal winding & Grafoil filler material with SS inner & CS Outer Ring as per ASME B16.20
6. All removable internals shall be pass through vessle manway (Manway ID= 24inch)
7. Mechanical Design of the vessel to be carried out considering full of liquid having maximum density.
8. Dimension of flanges shall be as per ASME B16.5 for size upto 24'' NB and as per ASME 16.47 series A for size greater than 24'' NB, unless otherwise stated.
9. ID of weld neck flanges shall match with corresponding ID of nozzle pipe/shell
10. For nozzle on shell,projections are preferred from vessel corner to flange contact face.
11. For nozzle on Head, projections are preferred from head T.L to flange contact face.
12. It shall be Vendors responsibility to select nozzle schedules.
13. All nozzle fabricated from plates shall be 100% radiographed.
14. Weight values,foundation loadings & template & ancorbolt size to be provided by Vendor.
15. Lifting lug details shall be provided by vendor.
16. Nozzle 2'' NB abd below except LWN type shall be stiffened with 2 nos. of 40x6 . Flat at 90^0 apart.
17. Connection in the bottom head of the skirt shall be brought to the outside of the skirt by piping adequate for the vessel desigh condition. No flanged joint will be allowaed inside the skirt.
18. The standard nozzle length shall be 8'' for nozzles12'' diameter and smaller and 10'' for nozzles and manway 14'' diameter and larger are required for removal of bolts, without damaging vessle insulation or for avoiding external obstructions such as top platform on vertical vessel.
19. Surface prepration , Paint system and protective coatings will be done according to paint specifications.

JOB NO. 17POC0139

NOTES :

1. ALL ELECTRICAL EQUIPMENT, CONSTRUCTION MATERIALS SHALL BE PURCHASED BY CONTRACTOR TO COMPLETETHE INSTALLATION.
   THE CONTRACTOR SHALL VERIFY THAT ALL WORK, APPLICABLE ELECTRICAL INSTALLATION METHODS, PROCEDURES, FITTINGS AND EQUIPMENT (PANELS, BOARDS, DISCONNECTS .XFMRs, CABLE, CONDUIT, AND CONDUCTOR TYPE AND SIZE, ETC.) SHALL BE IN COMPLIANCE WITH THE LATEST ADOPTED NEC, IEEE, UL, API, AND ASTM CODES AND STANDARDS AND ANY OTHER APPLICABLE LOCAL AND STATE CODES.
2. ALL AREAS ON DOCK THE FLOATING BARGE AREA CLASSIFIED AS CLASS 1, DIVISION 2.
3. ALL ELECTRICAL ENCLOSURES INSTALLED OUTSIDE SHALL BE NEMA 7.
   ALL POWER CABLES SHALL BE OF XHHW EXCEPT FOR WHERE NOTED TYPE.
4. THE LOAD ON THE MAIN POWER PANEL SHALL NOT EXCEED THE TRANSFORMER SECONDARY FLA LIMIT.
5. ALL ABOVE GROUND CONDUIT SIZES AND FITTINGS PURCHASED BY THE CONTRACTOR SHALL BE PVC COATED GALVANIZED CONDUIT, PLASTI-BOND OR ITS EQUIVALENT.
6. ALL UNDER GROUND CONDUIT SIZES AND FITTINGS PURCHASED BY THE CONTRACTOR SHALL BE PVC.
7. A TRANSITION AREA BETWEEN THE POWER PANELS AND FLOATING BARGE WILL USE FLEXIBLE CONDUITS. THE CONTRACTOR SHALL PURCHASE THE PROPER FITTINGS IN ORDER TO MAKE THE TRANSITIONS BETWEEN PVC COATED RGS AND THE FLEX CONDUIT.
8. THE CONTRACTOR SHALL MAKE SURE THE FLEXIBLE CONDUITS ARE NOT BENT MORE THAN THE BEND RADIUS OF THE POWER CABLES.
9. ALL UNDERGROUND CONDUIT SHALL BE PVC SCHEDULE 80 AND PROPER FITTINGS SHALL BE USED TO TRANSITION BETWEEN IT AND THE PVC COATED RGS CONDUIT.
10. UNDERGROUND CONDUIT SHALL BE AT A MINIMUM 30" & MAX. 48" BELOW GRADE, ENCASED IN A CONCRETE DUCT BANK.
11. THE CONTRACTOR SHALL INSPECT ALL NEW MATERIAL AND EQUIPMENT PRIOR TO INSTALLATION FOR DAMAGES AND SHALL VERIFY EQUIPMENT OPERATES SATISFACTORILY.
12. THE CONTRACTOR SHALL WARRANT ALL MATERIAL AND ELECTRICAL COMPONENTS FURNISHED TO COMPLETE ALL WORK FOR ONE YEAR AFTER FINAL ACCEPTANCE OF COMPLETION. MATERIALS AND ELECTRICAL COMPONENTS EFFECTS OF FAILURES DUE TO ABUSE, OR WORKMANSHIP NEGLECT SHALL BE MADE GOOD BY THE CONTRACTOR WITHOUT COST TO THE OWNER.
13. UPON COMPLETION OF WORK, THE CONTRACTOR SHALL TEST ALL WIRING AND ELECTRICAL COMPONENTS INSTALLED AND SHALL BE IN PERFECT WORKING CONDITION IN ACCORDANCE WITH THE INTENT OF THE DRAWINGS.
14. CONTRACTOR WORK SHALL PRESENT A NEAT APPEARANCE UPON COMPLETION OF ELECTRICAL INSTALLATION. ALL COMPONENTS INSTALLED SHALL BE PLUMB, STRAIGHT AND LEVEL.
15. DISCONNECT IS TO BE PROVIDED FOR PLC DSU & LIGHTING LOADS NEAR TO FLOATING BARGE AND PANEL PP-01 LOCATION.
16. FUSE SIZE AND DISCONNECT AT SERVICE ENTRANCE GROUNDING AS PER NEC.
17. FOR CABLE SIZE AND CONDUIT REFER ELECTRICAL CONDUIT & REFER ELECTRICAL CONDUIT & CABLE SCHEDULE DWG. NO. 17-033B-304
18. LOCATION DETAIL SHOWN IN ELECTRICAL EQUIPMENT LOCATION PLAN DWG. NO. 17-033B-303
19. METER SUPPLIED BY AEP AND INSTALLED IN METER BASE & BOX PROVIDED BY CONTRACTOR
20. PLC PANEL OF VCU#1 IS IN THE POWER PANEL BUILDING.

THE CONTRACTOR SHALL VERIFY THAT ALL WORK, APPLICABLE ELECTRICAL INSTALLATION METHODS, PROCEDURES, FITTINGS AND EQUIPMENT (PANELS, BOARDS, DISCONNECTS .XFMRs, CABLE, CONDUIT, AND CONDUCTOR TYPE AND SIZE, ETC.) SHALL BE IN COMPLIANCE WITH THE LATEST ADOPTED NEC, IEEE, UL, API, AND ASTM CODES AND STANDARDS AND ANY OTHER APPLICABLE LOCAL AND STATE CODES.
2. ALL AREAS ON DOCK EXCLUDING THE BARGE AREA ARE ASSUMED TO BE CLASSIFIED AS CLASS 1, DIVISION 2.
3. ALL ELECTRICAL ENCLOSURES INSTALLED OUTSIDE SHALL BE NEMA 7. ALL POWER CABLES SHALL BE OF XHHW EXCEPT FOR WHERE NOTED TYPE.
4. E-CS-01 IS THE PUSH BUTTON FOR SLOP TANK PUMP MOTOR. SEE REFERENCE DRAWING 17-033B-357.
5. LOCATION 7 PULL BOX, DISCONNECT & FIELD PANELS SHALL BE VERIFIED BY CONTRACTOR AT THE TIME OF FINAL INSTALLATION. TYPE.

2. ALL CABINETS ENCLOSURE ARE NEMA 12 TYPE.
3. HEIGHT OF THE BUILDING IS 10'-0". MANUFACTURED BY BABCO INDUSTRIES OR PROTECT CONTROLS

BUILDING SPECIFICATIONS

DESIGN CRITERIA REQUIREMENT:

1BC 2015, ASCE 7-10, 160 MPH WIND, EXPOSURE: "C"
IMPORTANCE FACTOR: 1.0, CATEGORY: III
FLOOR LIVE LOAD: 250 LBS PER SQUARE FOOT

BASE SPECIFICATIONS:

BASE STYLE: 12'WIDE EXTERIOR X 12' LONG EXTERIOR
MAJOR FRAME MEMBER SIZE: C12 X 20.7 CHANNEL
MINOR FRAME MEMBER SIZE: C5 X 6.7 CHANNEL
LIFTING FRAME MEMBER SIZE: C12 X 20.7 CHANNEL
FRAME MEMBER MATERIAL: CARBON STEEL
DECK PLATING: 1/4" CHECKERED PLATE CARBON STEEL
WELDING METHOD: STITCH WELDED TO FRAME, SEAM WELDED AT PLATE TO PLATE SEAMS, SKIP-STITCH WELDED TO ALL MAJOR, MINOR, AND SUB FRAME MEMBERS
FLOOR INSULATION: 4" POLYISOCYANURATE FOAM-(R21.2 RATING)
BASE FINISH: 2 MIL PRIMER UNDERCOAT, BLACK TRIM
DECK FINISH: 2 MIL PRIMER UNDERCOAT & GREY EPOXY NON-SKID
BASE BOTTOM FINISH: 2 MIL PRIMER UNDERCOAT WITH (20-25 MILS) MASTIC COATING
LIFTING PROVISIONS: FOUR (4) BOLT-ON REMOVABLE LIFTING LUGS

WALL & ROOF SPECIFICATIONS:

ROOF TYPE: STYLE LEG-LOW EAVE GABLE, WITH CORRUGATED FIBERGLASS COVER
WALL SIZE: 8' INTERIOR CEILING HEIGHT X 12' WIDE EXTERIOR X 12' LONG EXTERIOR
WALL MATERIAL: 16 GA. STEEL STUDS ON 24" CENTERS, WITH EXTERIOR CORRUGATED FIBERGLASS COVER AND INTERIOR FLAT FIBERGLASS SHEATHING
ROOF MATERIAL: 16 GA. STEEL ROOF JOIST ON 24" CENTERS, WITH EXTERIOR CORRUGATED FIBERGLASS COVER
WALL INSULATION: 4" STRUCTURAL POLYISOCYANURATE FOAM-(R-21.2 RATING)
ROOF INSULATION: 3" TO 5" STRUCTURAL POLYISOCYANURATE FOAM-(R-21.2 RATING)
WALL FINISH : ENCAPSULATED IN A NOMINAL 3/16" MIXTURE OF CHOPPED AND SPRAYED FIBERGLASS AND A CLASS ONE FLAME-RETARDANT RESIN.
A FINISH COAT OF WHITE GELCOAT WILL BE APPLIED TO ENSURE A SMOOTH U/V RESISTANT WEATHERPROOF FINISH.
ROOF/CEILING FINISH: COVERED WITH A NOMINAL 3/16" MIXTURE OF CHOPPED AND SPRAYED FIBERGLASS AND A CLASS ONE FLAME-RETARDANT RESIN.
A FINISH COAT OF WHITE GELCOAT WILL BE APPLIED TO ENSURE U/V RESISTANT WEATHERPROOF FINISH.
COMPLIANCE : EITHER UL 1897, UL 580, FM 4470 OR ASTME 1592

DOOR SPECIFICATIONS:

DOOR STYLE : SINGLE HUNG, OUTWARD OPENING
DOOR SIZE: 4'W X 7'H (QTY .1)
DOOR MATERIALS : FIBERGLASS
HINGE STYLE: STAINLESS STEEL-CONTINEOUS PIANO HINGE
THRESHOLD: STAINLESS STEEL STEP PLATE (QTY .1)
LOCKSET: STAINLESS STEEL SARGENT HEAVYDUTY SERIES 9U65, TWO (2) KEYS
DOOR INSULATION : 1-1/2" POLYISOCYANURATE FOAM (R-8 RATING)
COMPLIANCE: ASTM E 1886 AND ASTME 1996 REQUIREMENTS OF LARGE MISSILE TEST.

NOTES:

1. THE GROUNDING CABLE/STRIP ROUTING SHOWN HERE IS INDICATIVE ONLY. EXACT ROUTE SHALL BE DECIDED AT SITE ON PHYSICAL VERIFICATION FOR OTHER INSTALLED FACILITIES BEFORE INSTALLATION. IF REQUIRED GROUNDING CABLE/STRIP SHALL BE MODIFIED TO SUIT SITE CONDITION.
2. GROUNDING ELECTRODES LOCATIONS ARE INDICATIVE ONLY. EXACT LOCATION SHALL BE DEFINED AT SITE FOR EASE OF INSTALLATION WITHOUT INTERFERENCE. FURTHER GROUNDING CONNECTION FROM GROUNDING ROD TO EACH EUIPMENT / MOTOR TO BE COMPLETED BY CONTRACTOR AS PER SITE CONDITIONS.
3. ALL PIPE FLANGES, PIPE BENDING & PIPE GROUNDING SHALL BE DONE AS PER INSTALLATION STANDARD.
4. LIGHTING & SMALL POWER RECEPTACLE CIRCUIT SHALL BE WIRED IN 3-CORE CABLE, THE THIRD CORE SHALL BE THE GROUNDING CONDUCTOR.
5. ALL GROUNDING STRIPS INSTALLED BELOW GRADE SHALL BE BURIED MINIMUM OF 2 FEET.
6. ELEVATIONS OF EARTH BUS BARS SHALL BE DECIDED BY ELECTRICAL CONTRACTOR AS PER SITE CONDITION.
7. THE NEW STRUCTURE (PIPE RACK, RACK ETC.) GROUNDING SHALL BE PROVIDED AT EVERY 100 FEET INTERVAL.
8. THE EXCAVATION, BACKFILLING, LEVELLING ETC. FOR EARTH WORK (INCLUDING EARTH PIT WORK) SHALL BE CARRIED OUT BY ELECTRICAL CONTRACTOR.
9. THE REQUIRED NOS OF GROUNDING CABLE CU LUGS SHALL BE SUPPLIED BY ELECTRICAL SUB-CONTRACTOR.

4	1	EA	COUPLING
5	1	EA	DRIVING STUD
6	1	EA	REMOVABLE COVER. SEE NOTE 9

NOTES:

1. FIELD TO LOCATE GROUND ROD 4 IN OFF CENTER TO PROVIDE WORKING SPACE.
2. TOP OF GROUND WELL ELEVATION SHALL BE FLUSH WITH TOP OF FINAL GRADE.
3. THE DISTANCE FROM THE BOTTOM OF THE COVER TO THE TOP OF ROD SHALL BE 6 IN MINIMUM
4. THE GROUND WELL COVER MUST BE INSTALLED SO THAT IT IS ACCESSIBLE TO FACILITATE MAINTENANCE.
5. THE RESISTANCE TO GROUND OF EACH GROUND ROD SHALL BE 5 OHMS OR LESS BEFORE CONNECTION TO THE GRID. ADDITIONAL SECTIONS SHALL BE ADDED UNTIL 5 OHMS OR LESS IS MEASURED.
6. FOR INSTALLATION IN ROADWAYS, PARKING AREAS OR ANY VEHICULAR TRAFFIC, A 12 IN DIAMETER REINFORCED CONCRETE PIPE SHALL BE USED AS THE GROUND WELL ENCLOSURE.
7. THE BOTTOM 12 IN OF ALL VITRIFIED CLAY HUB ENCLOSURES USED SHALL BE PAINTED WITH TWO COATS OF ASPHALT PAINT FROM THE GRAVEL FILL LINE DOWN.
8. PENCELL PLASTICS BRAND MODEL PE-10HDH GRADE LEVEL BURIED CABLE ENCLOSURE; 12 IN DIAMETER; HIGH DENSITY POLYETHYLENE CONSTRUCTION; BASE FLANGE; AND REMOVABLE, HIGH DENSITY POLYETHYLENE LID WITH HEX HEAD BOLTS OR APPROVED EQUAL. OTHER ACCEPTABLE TYPES INCLUDE 12 IN DIAMETER VITRIFIED CLAY OR REINFORCED CONCRETE PIPE (SEE NOTE 6)
9. REMOVABLE COVER. REPLACEMENT PART NUMBER PE-10-PL FOR PENCELL BRAND ENCLOSURE. CAST CONCRETE FOR CLAY AND CONCRETE ENCLOSURE.
10. GROUND LOOP TO CLEAR ENCLOSURE BY MINIMUM OF 6 IN.
11. SOIL MUST BE TAMPED DOWN (COMPACTED) IN 12 INCH LAYERS AROUND THE ENCLOSURE TO STABLIZE THE ENCLOSURE AND REDUCE WATER EROSION.

GENERAL GROUNDING NOTES:

1. ALL GROUNDING CONNECTIONS OF COPPER-TO-COPPER AND COPPER-TO-STEEL SHALL BE CLEANED AND BOLTED. ALL UNDERGROUND CONNECTIONS TO BE MADE USING COMPRESSION CONNECTORS.
2. ALL CONNECTIONS SHALL BE TORQUED TO THE MANUFACTURER'S RECOMMENDED TORQUE LEVEL.
3. ANY PAINT OR OTHER NON CONDUCTIVE COATING MUST BE REMOVED AT THE POINT OF CONTACT OR A FASTENER WHICH WILL PENETRATE THE COATING MUST BE USED.
4. ANY PAINT OR OTHER NON CONDUCTIVE COATING REMOVED SHALL BE REPLACED AFTER GROUND CONNECTIONS HAVE BEEN MADE.

JOB NO. 17POC0139

NOTES:

1. THE CONTRACTOR SHALL VERIFY THAT ALL WORK, APPLICABLE ELECTRICAL INSTALLATION METHODS, PROCEDURES, FITTINGS AND EQUIPMENT (PANELS BOARDS, DISCONNECTS, XFMRs, CABLE, CONDUIT, AND CONDUCTOR TYPE AND SIZE, ETC.) SHALL BE IN COMPLIANCE WITH THE LATEST ADOPTED NEC, IEEE, UL, API, AND ASTM CODES AND STANDARDS AND ANY OTHER APPLICABLE LOCAL AND STATE CODES.
2. ALL MATERIALS SHALL BE NEW AND SHALL BE LISTED BY UNDERWRITERS LABORATORIES INC. (UL).
3. ALL POWER CABLES SHALL BE METAL-CLAD (MC) WITH COPPER CONDUCTORS.
4. ALL ABOVE GROUND CONDUIT SIZES AND FITTINGS PURCHASED BY THE CONTRACTOR SHALL BE PVC COATED RGS CONDUIT, PREFERABLY PLASTI-BOND OR ITS EQUIVALENT.
5. A TRANSITION AREA BETWEEN THE POWER PANELS AND BARGE WILL USE FLEXIBLE CONDUITS. THE CONTRACTOR SHALL PURCHASE THE PROPER FITTINGS IN ORDER TO MAKE THE TRANSITIONS BETWEEN PVC COATED RGS AND THE FLEX CONDUIT.
6. THE CONTRACTOR SHALL MAKE SURE THE FLEXIBLE CONDUITS ARE NOT BENT MORE THAN THE BEND RADIUS OF THE POWER CABLES.
7. CONDUITS ARE SHOWN DIAGRAMMATICALLY ONLY. EXACT ROUTING IS TO BE DETERMINED BY THE ELECTRICAL CONTRACTOR. THE SUPPORTS FOR METALLIC CONDUIT ARE TO BE PROVIDED BY THE CONTRACTOR AT INTERVALS NOT TO EXCEED NEC REQUIREMENTS. CONDUIT SHALL NOT BE SUPPORTED FROM PIPE HANGERS, CONDUITS SHALL BE INSTALLED PARALLEL OR PERPENDICULAR TO WALLS, STRUCTURAL MEMBERS, OR THE INTERSECTION OF VERTICAL PLANES AND CEILINGS UNLESS SPECIFICALLY NOTED OTHERWISE. THE MINIMUM HEADROOM FOR ALL CONDUIT RUNS (INCLUDING SUPPORT MATERIALS) SHALL BE 6'-9" WHERE POSSIBLE OR UNLESS NOTED OTHERWISE.
8. ALL RIGID CONDUITS SHALL BE TERMINATED AT MOTORS AND DEVICES WITH LIQUID TIGHT FLEXIBLE CONDUIT, EXCEPT WHERE DEVICES ARE MOUNTED ON WALLS OR COLUMNS AND NOT SUBJECT TO MOVEMENT DUE TO VIBRATION OR EXPANSION, CONTRACTION.
9. ALL METAL CONDUIT SHALL BE TERMINATED WITH AN INSULATING BUSHING OR HUB PRIOR TO PULLING CABLE. A GROUNDING TYPE BUSHING SHALL BE USED FOR CONDUITS ENTERING EQUIPMENT. FOR NON-CONDUCTIVE ENCLOSURES, BOND ENCLOSURE BACKPLATE TO EACH CONDUIT GROUNDING HUB.
10. CONDUIT CONNECTIONS TO BOTTOM OR SIDES OF EQUIPMENT, BOXES, ETC. SHALL BE MADE WITH UL LISTED WATERPROOF LOCKNUTS OR HUBS. TOP ENTRY SHALL BE AVOIDED WHENEVER POSSIBLE. IF TOP ENTRY IS NEEDED, CONTRACTOR SHALL OBTAIN APPROVAL FROM OWNER PRIOR TO INSTALLATION.
11. WHERE THERE IS A CHANGE OF ELEVATION IN A CONDUIT RUN, THERE SHALL BE A "TEE" FITTING WITH DRAIN FITTING AT LOWEST POINT.
12. ALL CONDUIT FITTINGS SHALL BE HOT DIPPED GALVANIZED MALLEABLE IRON OR IRON ALLOY WITH THREADED HUBS. ALL NUTS, BOLTS AND SCREWS FOR CONDUIT FITTINGS SHALL BE TYPE 316SS.
13. CONDUIT SUPPORTS SHALL BE WELDED OR BOLTED. BEAM CLAMPS, RIGHT ANGLE CLAMPS, PARALLEL CLAMPS, ETC. SHALL NOT BE USED.
14. FOR ADDITIONAL NOTES SEE DWG. CCT-00913.

NOTES:

1. ALL ELECTRICAL WORK SHALL BE PERFORMED IN COMPLIANCE WITH THE NATIONAL ELECTRIC CODE (NEC).
2. COORDINATE LUMINAIRE AND RECEPTACLE LOCATIONS WITH MECHANICAL & PROCESS EQUIPMENT, PIPING, AND STRUCTURAL LAYOUTS TO AVOID INTERFERENCE. ADJUST CONDUIT ROUTING AS NEEDED.
3. ALL CONDUIT FOR LIGHTING SHALL BE A MIN. 3/4" UNLESS NOTED OTHERWISE. PROVIDE JUNCTION BOXES AS NEEDED FOR HOMERUNS. USE 3 #12 AWG FOR ALL LIGHTING WIRES.
4. ILLUMINATION LEVELS ARE BASED ON API 540 AND IESNA LIGHTING HANDBOOK.
5. FOR AVERAGE ILLUMINATION LEVELS SEE THE STATISTICS TABLE IN THIS DRAWING.
6. ALL FIXTURE ELEVATIONS ON THE BARGE ARE BASED ON THE WORKING ELEVATION OF THE BARGE OF 11'-11 3/8". ALL FIXTURE ELEVATIONS ON LAND ARE BASE ON THE GRADE ELEVATION OF 13'-6". THE CONTRACTOR IS TO VERIFY THE BASE ELEVATIONS.
7. MOUNT TYPE F FLOODLIGHTS ON EDGE OF LEVEL 5 @ 47.65' AIMED FORWARD AND FIELD TILT VERTICALLY 60 DEGREES ABOVE NADIR (OR 30 DEGREES BELOW HORIZONTAL).
8. ALL TYPE P POLE MOUNT FIXTURES ARE MOUNTED ON LAND 24' ABOVE AREA OF ILLUMINATION (25' POLE LESS 1' FIXTURE DROP).
9. ALL TYPE S STANCHION MOUNT FIXTURES ARE 7' ABOVE AREA OF ILLUMINATION (6' STANCHION LESS 1' FIXTURE DROP).
10. SURFACE MOUNT ALL TYPE C1 CEILING FIXTURES DIRECTLY UNDER DECK ABOVE. THE ONLY TYPE C1 FIXTURES SHOWN IN THIS VIEW ARE UNDER THE LEVEL 1 AND LEVEL 2 STAIR LANDINGS.
11. SURFACE MOUNT ALL TYPE C2 CEILING FIXTURES DIRECTLY UNDER LEVEL 4 DECK TO LIGHT BARGE DECK AREA OVER SHIP LOADING AREA.
12. TYPE F LIGHT LOSS FACTOR = 0.9 LDD x 0.80 LLD WHICH IS AFTER 50,0000 HOURS AT 25 DEGREES C = 0.72.
13. TYPE P LIGHT LOSS FACTOR = 0.90 LDD x 0.98 LLD WHICH IS AFTER 50,0000 HOURS AT 25 DEGREES C = 0.88.
14. TYPE C1, C2 & S LIGHT LOSS FACTORS = 0.9 LDD x 1.0 LLD WHICH IS AFTER 50,000 HOURS at 25 DEGREES C = 0.90.
15. NO REFLECTANCES ARE CONSIDERED IN THIS DRAWING.
16. CONTRACTOR TO DETERMINE PROPER INSTALLATION OF CEILING MOUNT AND FLOOD LIGHT FIXTURES,
17. ALL LIGHTING FIXTURES ARE TO BE OPERATED BY PHOTOCELLS WITH MANUAL OVERRIDE. THE TYPE, PURCHASE, AND PLACEMENT TO BE DETERMINED BY CONTRACTOR.

TO ALL POTENTIAL BIDDERS

Subject: Addendum No. 6 for the Bulk Liquid Handling Facility at Bulk Dock 3

Ladies/Gentlemen:

This addendum is considered part of the Contract Documents and is issued to change, amplify, add to, delete from, or otherwise explain the Contract Documents. Where provisions of this addendum differ from those of the original Contract Documents, this addendum will take precedence and govern.

Bidders are hereby notified that they must incorporate this addendum into their bids, and it will be construed that the contractor's bid reflects with full knowledge all items, changes, and modifications to the Contract Documents herein specified. Bidders will acknowledge receipt of this addendum in the space provided on the Bid form.

Revised **BID FOR**
BULK LIQUID HANDLING FACILITY
AT BULK DOCK 3
PORT OF CORPUS CHRISTI AUTHORITY

Port Commissioners
Port of Corpus Christi Authority
P. O. Box 1541
Corpus Christi, Texas 78403

Dear Commissioners:

The undersigned bidder, in compliance with your Notice to Bidders for **BULK LIQUID HANDLING FACILITY AT BULK DOCK 3**, having examined the specifications with related Contract Documents and the site of the proposed work and being familiar with all of the conditions surrounding construction of the proposed project, including the availability of materials and supplies, will construct the project, in accordance with the Contract Documents, within the time set forth herein, and at the prices stated below. The bidder hereby proposes to furnish all labor, materials, tools, equipment, supplies, superintendence, insurance, incidentals, and services necessary or required to complete the work as shown on the drawings and described in the specifications for the prices noted below (includes profit and overhead).

A. BASE BID: The base bid item includes all work not specifically identified as an additive, deductive, or alternate bid item. Additive, deductive, or alternate bid items are those items that may be added to or deleted from the contract if so desired by the PCCA.

Scope of work generally includes the construction and commissioning of a bulk liquids handling facility transfer of petroleum products from vessels to railcars. Site work improvements include fabrication of piping, racks, pile foundations, cast in place concrete, electrical improvements, area lighting, and mooring bollards. Equipment installation includes mechanical systems, instrumentation, control building, and vapor combustion unit. Work also includes the relocation of 105-foot long pipe bridge. This is a Lump Sum bid item.

Total Base Bid $_____
(Numbers)

_____ Dollars
(Words)

B. The following procedure will be utilized in resolving arithmetical and other discrepancies found in the Bid:

1. Obviously misplaced decimal points will be corrected;

2. Obvious errors in addition, subtraction, or multiplication will be corrected;
3. Readily apparent errors in interpretation of various bid items will be corrected.
4. Words will govern over numerals.

C. For the purposes of bid evaluation, bidder understands that this is a Lump Sum bid. Bidder agrees that use of the extended values on the Bid Breakdown Sheet for evaluation of this Bid does not cause the contract to be a unit price contract. In the event of any conflict between the Bid and Bid Breakdown Sheet, the Bid will govern.

D. For work not covered in Section A or by separately agreed prices, compensation will be calculated on a time and materials basis for extra work. (Refer to paragraph 6.03 of the General Conditions.)

1. The bidder will attach a Schedule of Equipment Rental Rates for extra work.

   NOTE: The equipment rental rates will include cost of fuel, oil, grease, maintenance, overhead, profit, depreciation charges, taxes, insurance, and all other charges, except for operators. No increase or change in the rates will be made for overtime hours or for any other reason.

2. The bidder will attach a Schedule of Labor Charge Rates for extra work.

   NOTE: The labor rate schedule will include labor classifications and charge rates. Profit, overhead, taxes, and insurance will be included in the charge rates. For calculation of overtime compensation, the PCCA workweek begins Monday a.m.

3. Materials used for extra work will be charged at cost plus 15%. The 15% markup will include all indirect costs, such as bond and insurance costs, profit, overhead, *etc*.

E. Enclosed with the Bid is a bid bond or cashier's check in the amount of $_____, which amount is not less than five (5) percent of the maximum amount of the contract (base bid plus all possible combinations of additive, deductive, and alternate bid items). Cashier's checks must be drawn on a bank that is a member of the Federal Reserve System (no personal or company checks will be accepted). It is agreed that this bond or check will be forfeited to the Owner if this Bid is accepted within sixty (60) calendar days from the date Bids are received and the undersigned bidder fails to enter into a written contract and execute Performance and Payment Bonds and Certificates of Insurance under the terms and conditions stated in the Contract Documents within fourteen (14) calendar days of the date of the written Notice of Award of Contract. Otherwise, the bond or check will be promptly returned to the bidder.

F. The bid price is subject to acceptance by the PCCA for a period of sixty (60) calendar days from the scheduled closing date for receiving bids.

G. If awarded the contract, the undersigned bidder hereby agrees to commence work under this contract within ten (10) calendar days of the date of the written Notice to Proceed, to achieve Substantial Completion on or before December 31, 2017, and March 1, 2018 in accordance Paragraph 1.03 "TIME OF COMPLETION" of the Special Conditions. The bidder specifically acknowledges and agrees to provisions in the General and Special Conditions and the Agreement, under which damages may be assessed for failure to complete the work within the required completion time.

H. The bidder must complete the attached Bid Breakdown Sheet to expedite proper evaluation of the bids. This sheet is a part of the Contract Documents. Failure to complete and submit this sheet with the Bid (unless otherwise indicated in the Special Conditions) may cause the Bid to be rejected. PCCA reserves the right to require the bidder to revise any errors and resubmit the Bid Breakdown Sheet.

I. Bidders are required to complete a Conflict of Interest Questionnaire (Form CIQ) and submit it with the bid (see paragraph entitled "Conflict of Interest" in the General Conditions) if Bidder has:

1. Any employment or other business relationship with any employee of the PCCA.
2. Any employment or other business relationship with any relative of an employee of the PCCA.
3. Given any gifts or services of more than $100 in aggregate value to any employee or relative of an employee of the PCCA within the preceding 12-month period.

J. The successful bidder will be required to comply with the provisions of Section 2252.908 of the Texas Government Code and Chapter 46 of the Texas Ethics Commission Rules by preparing and submitting Texas Form 1295, "Certificate of Interested Parties" and submitting the signed and notarized form to PCCA at the time the contract is executed. PCCA will provide the unique identifier and description of services for Box 3 on Texas Form 1295.

Instructions for preparing Form 1295 are available at: https://www.ethics.state.tx.us/whatsnew/elf_info_form1295.htm.

K. Bidders are required to furnish written information concerning any citation, notice of violation, or penalty regarding a safety or environmental violation by Bidder made by any agency or department of this state or the federal government within the past five years. This

information must include a general description of the conduct that resulted in the citation or notice of violation or penalty and the document(s) sent from the agency or department to Bidder that set forth the citation, violation, or penalty.

L. Bidders must bid on all items and subitems except as otherwise specified in the Bid.

M. Any qualification or exception to the requirements of these Contract Documents may cause the Bid to be rejected.

N. The bidder understands that the PCCA reserves the right to reject any or all Bids and to waive any minor informalities or irregularities in the bidding.

Bidder acknowledges receipt of the following addenda: *(List Addendum Number(s))*

3rd Revision SPECIAL CONDITIONS

1.1 GENERAL. The provisions of this section of the Contract Documents will govern in the event of any conflict between the Special Conditions and the General Conditions.

1.2 PROJECT DESCRIPTION / SCOPE OF WORK. The Contract Documents intend to provide and secure **BULK LIQUID HANDLING FACILITY AT BULK DOCK 3.**

Scope of work generally includes the construction and commissioning of a bulk liquids handling facility transfer of petroleum products from vessels to railcars. Site work improvements include fabrication of piping, racks, pile foundations, cast in place concrete, electrical improvements, area lighting, and mooring bollards. Equipment installation includes mechanical systems, instrumentation, control building, and Vapor Combustion Unit (VCU). Work also includes the relocation of 105-foot long pipe bridge.

1.3 TIME OF COMPLETION. It is anticipated this contract will be awarded at the PCCA Commission Meeting of Tuesday, September 19, 2017. It is further anticipated that the Notice to Proceed will be issued upon execution of the Agreement by Monday, October 9, 2017. Contractor shall conform to the following deadlines.

TASK		**DEADLINE**
1	Commissioning process for unloading petroleum products from ocean going barges and inland barges to diesel/gasoline tie-in lines for Howard Project as labeled on drawing sheet 17-033B-03.	Commission to begin by December 31, 2017
2	Capability, including commissioning of unloading petroleum products from ocean going barges and inland barges and transfer to rail car loading facility.	Substantially Complete by December 31, 2017
3	Capability of unloading petroleum products from ocean going barges and inland barges to diesel/gasoline tie-in lines for Howard Project as labeled on drawing sheet 17-033B-03.	Substantially Complete by March 1, 2018
4	Capability of loading petroleum products to vessels from diesel/gasoline tie-in lines for Howard Project as labeled on drawing sheet 17-033B-03.	Substantially Complete by March 1, 2018
5	All other work, including two monopole mooring structures.	Substantially Complete by March 1, 2018

After January 1, 2018, the dock may be operational and Contractor must continue to coordinate work activities with with dock operator and dock operations.

1.4 VAPOR COMBUSTION UNITS. Vapor Combustion Unit (VCU) #1 – If the fabrication, delivery and installation of the new VCU #1 extends beyond the required substantial completion time, Contractor shall provide a temporary VCU #1 until such new VCU #1 is furnished and installed. Contractor will be responsible for delivery, installation, commissioning, and temporary fueling of temporary VCU #1 until the new (permanent) VCU

#1 is delivered for installation by the Contractor. If a temporary VCU #1 is required, completion of temporary VCU #1 shall be provided prior to achieving Substantial Completion. A Notice of Substantial Completion and Final Acceptance will be issued for the Work to exclude the VCU #1. A separate Notice of Substantial Completion and Final Acceptance will be issued for the Work related to the new (permanent) VCU #1.

Owner Supplied Vapor Combustion Unit (VCU) #2 – Repairs to the Owner supplied VCU #2 are detailed in the construction drawings. Completion of VCU #2 repairs and installation are required prior to Substantial Completion.

The natural gas main line extension is being installed by others. Should this natural gas line not be available for a service connection, Contractor shall supply temporary fuel sources for testing and commissioning of all applicable dock equipment, systems, and VCUs. Contractor will then be responsible for connection of the VCUs to the utility supplied natural gas when the natural gas utility becomes available.

1.5 LIQUIDATED DAMAGES. Liquidated damages in the amount of $2,000 per day will be assessed against the Contractor for each day beyond the required Substantial Completion time for any task identified in Special Condition paragraph 1.3 TIME OF COMPLETION that the tasks remains substantially incomplete. Liquidated damages will at no time exceed $2,000.00 per day...

1.6 SCHEDULING CONSTRAINTS. The Contractor shall not interrupt operations of the PCCA, its Users, or service providers for the Users or the vessels moored at the Bulk Terminal Docks 1 and 2. Access to all the areas of the Bulk Terminal has priority over construction activities and the Contractor will coordinate construction work with the surrounding bulk material handling activities. The Contractor will stage material and equipment to not conflict with ship and barge traffic, adjacent rail facilities and/or gantry crane operations. Contractor may be required to move materials and equipment as directed or as necessary during construction.

Furthermore, the Contractor is required to protect any work-in-progress from dock activity. The Contractor shall work during daylight hours and around the vessel loading schedule. Work that can be accomplished without disruption to cargo transfer activities may be allowed during loading activities. The Contractor shall coordinate the work schedule with the vessel loading schedule weekly at progress meetings with PCCA. Details and procedures for communicating this information will be established at the Pre-Construction conference.

See Special Conditions, 1.12 MATERIALS TO BE FURNISHED BY OWNER.

1.7 ACCESS. To access Bulk Dock 3 from the Joe Fulton Corridor, Contractor must use the PCCA Bulk Terminal Gate. For accessing Oil Dock 1 and adjacent areas from the Joe Fulton Corridor, Contractor must use the PCCA Avenue F Gate. Contractor is advised that there are active railroad tracks that traverses the entrance/access roads and that train delays are possible. These areas are "Restricted" or "TWIC Secure" areas as defined by Technical Section 01 14 13, and provisions of this specification apply. Contractor

employees are also required to have Contractor Safety Council of the Coastal Bend for Basic Plus of Marsec Security training at this project site.

1.8 PERMITS. Contractor shall comply with applicable terms and conditions mandated in the permits/licenses and the permits/licenses are part of the contract. A City of Corpus Christi building permit is not required for this Project, however, applicable codes and regulations do apply.

Changes in applicable laws and regulations or modification to permits and licenses that occur after Contract Award will be incorporated into the Contract by a written change order that will address any applicable cost or schedule impacts.

1.9 GEOTECHNICAL ENGINEERING STUDY. A geotechnical report prepared by Professional Service Industries, Inc. (PSI) titled "Subsurface Exploration and Foundation Evaluation for Proposed PCCA Bulk Dock 3," dated July 9, 1996 is available on request.

1.10 ENVIRONMENTAL POLICY. The following Environmental Policy supersedes the policy listed in the General Conditions. The new Environmental Policy states:

The Port of Corpus Christi Authority ("***Port***") Commission formally adopts a set of guidelines designed to further demonstrate Environmental Leadership in the South Texas Coastal Bend region.

In its commitment to be "***An Environmental Leader,"*** the Port of Corpus Christi Authority in collaboration with stakeholders will strive to exceed what is required as a minimum by applicable rules and regulations to mitigate environmental impacts, prevent pollution, and employ continuous improvement policies and environmental stewardship initiatives that promote the following five (5) key precepts:

- **Air Quality** in attainment of national air quality standards and in support of the Corpus Christi region's efforts to stay in attainment through voluntary actions;
- **Water Quality** that maintains or improves the health of the coastal bend ecosystems;
- **Soils & Sediments** protective of human health and the environment;
- **Wildlife Habitat** development, improvements, and replacement when modification to existing habitat is necessary; and
- **Environmental Sustainability** in the development of port facilities and in ongoing port operations.

The Port's Environmental Policy is the formalization of many existing environmental programs that address soil, sediment, wildlife, air and water quality impacts. Together, these programs have already realized tremendous positive impacts in the surrounding communities and estuaries. The Port also intends to use legislative channels, where appropriate, to help meet its environmental agenda.

The Environmental Policy is one of the strategic imperatives that will be considered and integrated into decisions related to the development of infrastructure or the operations of Port

facilities, supporting the Port of Corpus Christi's vision *To Be the Energy Port of the Americas* and its mission of *Leveraging Commerce to Drive Prosperity* for the Port, its stakeholders, and the Community, Region, State, and Nation.

1.11 MATERIALS TO BE FURNISHED AND INSTALLED BY CONTRACTOR. All equipment specified on the drawings and included as part of the bill of materials for valves, fittings, instrumentation, etc. shall be purchased and installed by the contractor unless otherwise specified on this Special Conditions, Engineer's Plans and Specifications and bid documents.

1.12 MATERIALS TO BE FURNISHED BY OWNER. The following items are furnished by the Owner for use on this project. Bidders shall contact Mr. Carlos Martinez at 361.885.6692 or via email at carlos@pocca.com to arrange to inspect these systems during bidding. Bidders shall provide a minimum of 48 hours' notice for inspection requests.

a. Vapor Combustion Unit #2 – Vapor Combustion Unit (VCU) #2 is available for inspection at Oil Dock 1 during project bidding. Oil Dock 1 is an active terminal and inspections shall be coordinated to not interfere with ongoing dock operations.

   Contractor shall inspect VCU #2 to determine repairs required to provide for a fully functioning VCU #2 system. By submitting a bid, Contractor acknowledges that the Owner furnished VCU #2 is suitable for repair, installation and use with the Project.

b. Steel Bridge for Convey System – The steel bridge system is currently erected and located to the west of Oil Dock 1 and south of the PCCA Maintenance facility and is available for inspection during project bidding. Contractor shall take ownership of the bridge system upon Award of Contract. Steel bridge superstructure shall be unassembled as required, transported to, and re-assembled/erected at the project site in accordance with the Construction Documents. The PCCA shall retain ownership of the existing capped/flanged steel pipe segments located in the top section of the bridge and the Contractor shall deliver these pipe segments to a PCCA identified area within the PCCA Inner Harbor.

c. Floating Barge System with Hose Tower, Hydraulic Crane and Dock Safety Unit Skid - The floating barge system is located at Bulk Dock 3 and is available for inspection during project bidding. Bidders shall contact Mr. Carlos Martinez (see paragraph above). Providing for safe and effective barge mooring during construction shall be the Contractor's responsibility. Contractor to inspect current barge mooring system and make adjustments as necessary to provide for safe and effective mooring during construction activities. By submitting a bid, Contractor acknowledges that the floating barge system can be moored safely during Contractor's activities.

d. Climate Controlled Building – The Climate Controlled Building is currently located at Oil Dock 1. The building is available for inspection during project bidding. By submitting a bid, Contractor acknowledges that the Owner furnished building is suitable for transport and installation for this Project.

e. Metering Skids – Metering skids are not currently located onsite and are scheduled to arrive on or before December 1, 2017. Contractor shall inspect, receive, and take ownership of up to nine metering skids upon arrival of equipment on site. Contractor shall coordinate with the third party metering skid provider (contact information for third party provider to be provided after Award of Contract). Metering skids are wheel mounted units that can be transported/maneuvered upon delivery with a light pickup truck (approximately 20,000 pound towing capacity). It will be contractor's responsibilities to modify the metering skid's control circuit to interphase its operation in conjunction with the overall system.

f. As soon as the PCCA has determined the project is Substantially Complete, Contractor will provide, at a minimum, 14 day notice to PCCA for coordination of a vessel loaded with crude oil or petroleum products ready to be discharged at Bulk Dock 3 for systems acceptance testing, provided that such vessel will not be required to remain at Bulk Dock 3 for such purposes for more than 72 hours.

1.13 INSURANCE. USL&H, Maritime, Builder's Risk, Contractor's Pollution Liability, Railroad Protection and Umbrella Liability Coverage is required for this project.

In addition to the required insurance coverage's pursuant to the GENERAL CONDITIONS, Contractor shall provide and maintain the following insurance coverages (the "Policies") as follows:

a. To the extent that Contractor owns and/or will operate vessels in order to perform the work within the specifications for this Project, a Protection and Indemnity insurance policy is required, with a minimum limit of $10,000,000 any one accident or occurrence, naming the Port of Corpus Christi Authority, its PCCA Commissioners, officers, officials employees and agents as additional insured's.

b. See Section 3.36 of the General Conditions for all other requirements.

1.14 BONDS. Performance and Payment Bonds are required when the successful bidder executes the contract, each for 100% of the total contract price.

1.15 QUALIFICATION OF CONTRACTORS. Contractor, subcontractors, vendors and material suppliers must be able to demonstrate a level of experience satisfactory to the PCCA in performing work similar to this project.

a. The Contractor shall employ for this Project, as its field administration staff, superintendents, and foremen who are careful and competent and acceptable to the PCCA. The Project Superintendent must have at least five years of recent experience

in the oversight of projects that include similar work and are equal to or greater in size and complexity to this Project. This experience must include scheduling of manpower and materials, safety, coordination of Subcontractors, experience with the submittal process and contract closeout procedures. The Project Superintendent is to be present at the Site at all times that Work is being performed, Foremen must have at least five years of recent experience in similar work and be subordinate to the Project Superintendent. Foremen cannot act as a superintendent without prior written approval from the PCCA.

b. Contractors shall submit documentation concerning these requirements for PCCA review within 14 calendar days of Notice of Award of Contract is issued. Written approval is also necessary prior to a change in field administration staff during the term of this Contract. The Contractor's field administration staff, and any subsequent substitutions or replacement thereto, much be approved by the PCCA in writing prior to such Project Superintendent of Foreman assuming responsibilities on the Project.

c. Contractors and Subcontractors shall have a documented safety record that meets industry standards as applicable for their respective work categories.

1.16 PRE-CONSTRUCTION CONFERENCE. A pre-construction conference will be scheduled prior to commencement of construction.

1.17 RAILROAD WORKPLACE SAFETY. Attached for reference is Exhibit A - the Roadway Worker Protection (RWP), Roadway Maintenance Machines (RMM) and On-Track Safety Rules for the GWRR – Rail Link Region effective Monday, May 2, 2016. The Rail Link is the Corpus Christi Terminal Railroad (CCTR). The Port's Manager of Rail Operations is John Slubar and he will be the point of contact for setting up communications with the CCTR. Mr. Slubar can be reached at 361-885-6185.

1.18 USE OF PCCA FACILITIES AND UTILITIES. During execution of the Project, the Contractor will be allowed to use PCCA facilities and utilities as follows:

Facility/Utility	Allowed	Not Allowed
Restrooms / Lunchrooms		X
Offices		X
Telephones		X
Vending Machines		X
Water		X
Electricity		X
Sewage		X

Contractor is responsible for any required hookup or installation costs associated with use of the above. Contractor will not be allowed to overload any circuits with construction equipment or tool loads. PCCA needs and utilization of these facilities will have priority over those of Contractor. Contractor will be responsible for any damage to PCCA facilities or utilities caused by Contractor's use.

1.19 TESTING SCHEDULE. The following construction materials testing program will be performed in accordance with the Technical Specifications and General Conditions. Testing initially paid by PCCA that fails and requires follow-up testing will be paid by the Contractor:

DESCRIPTION	RATE	EST QTY
SOIL:		
STANDARD PROCTOR - TRENCH BACKFILL	PER MATERIAL SOURCE	1
STANDARD PROCTOR - SUBGRADE	PER PROJECT SITE	1
DENSITIES - TRENCH BACKFILL	PER 200 LF TRENCH/LIFT	5
DENSITIES - SUBGRADE	PER 10000 SF/LIFT	5
FLEXIBLE BASE:		
SIEVE ANALYSIS	PER 3000 CY	1
ATTERBURG LIMITS	PER 3000 CY	1
DENSITIES OF COMPACTED BASE	PER 10000 SF/LIFT	3
CONCRETE:		
(UNCONFINED COMPRESSION, 7, 14, & 28 DAY)		
CONCRETE CAP	PER 50 CY OR PER DAY	3
CONCRETE FOUNDATION	PER 50 CY OR PER DAY	4
CONCRETE SLAB	PER 50 CY OR PER DAY	3
PIPING:		
STEEL PIPE WELDS	10% OF FIELD WELDS PER DAY (RADIOGRAPH)	30

Contractor shall coordinate and cooperate with PCCA's construction material testing contractor to schedule and conduct construction material tests as appropriate. Contractor to provide at least 24 hours advance notice to schedule construction materials tests. The PCCA may conduct additional testing at the PCCA's discretion.

1.20 LIST OF DRAWINGS. Accompanying these specifications and included herein by reference are the drawings listed as follows:

1.21 CONTRACTOR'S DAILY REPORTS. Daily reports will be prepared by the Contractor and submitted to PCCA Project Engineer at the conclusion of each week.

1.22 EXPLORATORY EXCAVATION. Underground utilities and structures shown on the project plans are shown as accurately as possible; however PCCA does not guarantee that all utilities are shown, or shown in the exact location. It shall be the responsibility of the Contractor at its sole expense to determine the exact location of underground utilities and structures that may interfere with construction by exploratory excavation prior to commencing work. The Contractor shall proceed with caution in the excavation so that the exact location of underground utilities and structures, both marked and unmarked, may be determined. In the event that an underground utility or structure is encountered, it shall be the Contractor's responsibility at its sole expense to determine the utility and its owner, and notify the Engineer for a determination of direction for continuing work. The Contractor will be held responsible for the repair of any utility or structure damaged by the Contractor's actions or inactions during excavation. Prior to the end of each work day, exploratory excavations made shall be backfilled with the native excavated material and compacted to prevent subsequent settlement. Excavations made within paved areas shall be permanently resorted to its original condition. Excavated materials shall not be placed in storm drainage conveyances, temporarily or permanently.

1.23 CONCRETE WASHING. Washing out of concrete trucks serving the construction project is only allowed in areas approved by PCCA Project Manager. The Contractor will ensure that the discharge of the washout water will not cause groundwater contamination. Discharges from the washout of form release oils, curing compounds, and other materials are not permitted. All wastes must be properly disposed of offsite by Contractor.

1.24 AIR MONITORING NETWORK. PCCA maintains a system to monitor dust originating from the Bulk Terminal site. Contractor shall ensure at all times that construction activities are conducted in such a way as to not produce dust. If dust becomes an issue, contractor must immediately remedy the situation by the use of water sprays or whatever means necessary to prevent causing dust.

1.25 PREVAILING WAGE RATE. The following pages are lists of wage rates that have been determined to be the prevailing minimum rates in this area. Contractor will not pay less than these rates.
